Safety symbols and warnings

The following symbols are used in this manual, the list below explains each symbol.

This symbol in conjunction with the signal word "**DANGER**" indicates an imminent electrical hazard.

Failure to observe the related safety note may cause injury, death or equipment damage.

This symbol in conjunction with the signal word "WARNING" indicates a potentially dangerous situation.

Failure to observe may cause injury, death or equipment damage.

This symbol indicates a safety note: "ATTENTION! Hazardous voltage!" Installation by a certified service engineer only.

This symbol in conjunction with the signal word "**NOTE**" indicates operator tips or particularly useful or important information for the use of the product.

This symbol and wording does not indicate a dangerous situation.

This symbol indicates that reading the instruction manual/booklet before starting work or before operating equipment or machinery is compulsory.

1. Important safety instructions

BEFORE READING THE OPERATING MANUAL, PLEASE CAREFULLY READ THIS CHAPTER ON IMPORTANT SAFETY INSTRUCTIONS

1.1. Save these instructions

This manual contains important instructions for model ATS 16A (Automatic Transfer Switch) that should be followed during installation and maintenance.

It also provides guidelines to check delivery and is intended for people who plan the installation and use of the product. The reader is expected to know the fundamentals of electricity, wiring, electrical components and electrical schematic symbols.

READ ALL SAFETY AND OPERATING INSTRUCTIONS BEFORE OPERATING THE ATS 16A (AUTOMATIC TRANSFER SWITCH) SYSTEM. OBSERVE TO ALL WARNINGS ON THE UNIT AND IN THIS MANUAL

BY NOT FULFILLING THIS OBLIGATION, THE PRODUCT MAY LOSE ITS WARRANTY

INSTALLATION SHALL BE IN COMPLIANCE WITH ALL APPLICABLE NATIONAL, STATE, AND LOCAL CODES

WARNING

1.2. Safety rules

 RISK OF ELECTRIC SHOCK - DISCONNECTION OF AC SOURCE(S) (AND THE DC SOURCE) IS REQUIRED TO DE-ENERGIZE THIS UNIT BEFORE SERVICING

THERE IS DANGER OF AN ELECTRICAL IMPACT.

DANGER

STATUS	SECURITY LEVEL	DOCUMENT ID.	REV.	LANG.	PAGE
Approved	Public	4NWD003885	Α	EN	4/18

Follow all operating and user instructions.

READ THE INFORMATION, IN ORDER TO AVOID DAMAGE TO EQUIPMENT.

WARNING

The user must follow the precautions and only perform the operations described. Also, in these measures the operator of the ATS 16A (AUTOMATIC TRANSFER SWITCH) system must observe the instructions in this manual. Any deviations from the instructions could be dangerous to the user or cause accidental load loss.

THE MANUFACTURER WILL NOT BE HELD RESPONSIBLE FOR DAMAGES CAUSED THROUGH INCORRECT MANIPULATION OF THE UPS SYSTEM.

IT IS PROHIBITED TO REMOVE ANY PARTS FROM THE ATS 16A (AUTOMATIC TRANSFER SWITCH) SYSTEM OR FROM ANY OPTIONAL PART.

DANGER

THERE IS A DANGER OF ELECTRICAL SHOCK!

HIGH FAULT CURRENTS (LEAKAGE CURRENTS):

BEFORE CONNECTING THE MAINS YOU MUST ENSURE THAT THERE IS A PROPER EARTH CONNECTION!

DANGER

2. Installation

2.1. Receipt and visual inspection

ON RECEIPT, CHECK THE PACKAGING AND ENSURE THAT THE CONTENTS ARE UNDAMAGED. ANY DAMAGED OR MISSING PARTS MUST BE REPORTED TO THE SUPPLIER AS SOON AS POSSIBLE.

2.2. Unpacking list

The ATS-16 A is available voltage level 220/230/240VAC. Nominal current: 16 A.

- ATS-16 A module
- 2 pluggable input power cables (p/n: 108-00140-xx)
- Bracket kits (for rack mounting and vertical mounting)

NOTE:

1. An approved power cord greater or equal to H05VV-F, 3G, 0.75mm² must be used.

2.3. Storage

Storage temperature: -25-70 °C

Storage humidity: 10%-90%

2.4. Handling

THE EQUIPMENT MUST BE HANDLED WITH CARE; DAMAGE MAY BE CAUSED IF DROPPED OR SUBJECTED TO SEVERE IMPACT.

WARNING

STATUS	SECURITY LEVEL	DOCUMENT ID.	REV.	LANG.	PAGE
Approved	Public	4NWD003885	Α	EN	6/18
© Copyright 2019 ABB All rights reserved					

2.5. Environmental conditions

THE ATS-16 A MUST BE EITHER RACK MOUNTED OR INSTALLED ON A LEVEL AND EVEN SURFACE IN AN AREA PROTECTED FROM EXTREMES OF TEMPERATURE, WATER, AND HUMIDITY, AND FROM THE PRESENCE OF CONDUCTIVE POWDER OR DUST

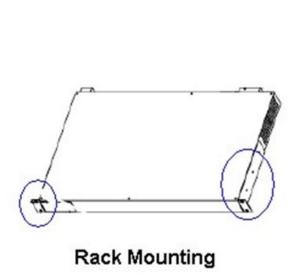

DO NOT STACK UNITS AND DO NOT PLACE ANY OBJECTS ON TOP OF THE UNIT.

WΔ	RI	JII	NC

STATUS	SECURITY LEVEL	DOCUMENT ID.	REV.	LANG.	PAGE
Approved	Public	4NWD003885	Α	EN	7/18

2.6. Rack Mounting

When mounting the ATS-16 A in a cabinet, please ensure that the chosen cabinet is capable of supporting the unit with the corresponding rails or brackets. The ATS-16 A scope of supply contains two brackets for fixing the ATS-16 A into a 19-inch rack or into a cabinet with 19-inch inner design. Vertical mounting is also possible with the ATS-16 A.

Vertical Mounting

2.7. Dimensions of area

IT IS NECESSARY TO LEAVE A MINIMUM SPACE OF A FEW CENTIMETERS ON THE RIGHT, LEFT AND REAR TO ALLOW THE FLOW OF AIR AND TO PROVIDE ACCESS TO THE INTERFACE

STATUS	SECURITY LEVEL	DOCUMENT ID.	REV.	LANG.	PAGE
Approved	Public	4NWD003885	Α	EN	8/18
© Copyright 2010 ARR All rights recovered					

3. Installation

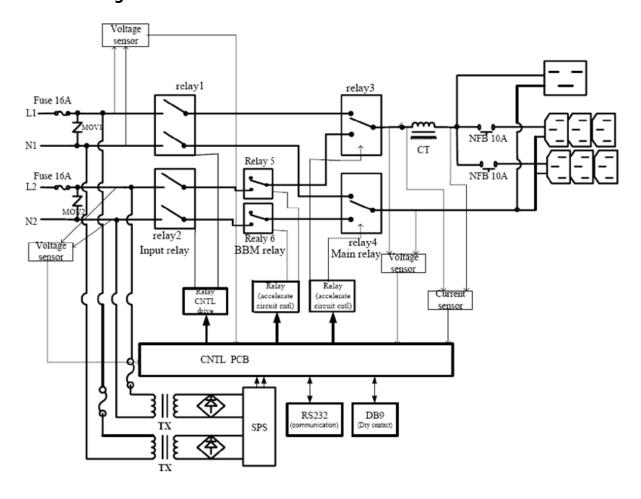

3.1. Configuration of the ATS-16 A system

The ATS-16 A provides high reliability supply by switching the load to one of two possible power supplies.

Primarily, these two supplies are UPS devices with sinusoidal output only. These UPS devices must operate on the double conversion principle.

3.2. Technical Data

3.2.1. Block Diagram

3.3. External Protection and Isolation Devices

External devices for the protection of cables and for isolating the ATS-16 A and UPS must be installed upstream and downstream of the equipment. Select and configure the isolating device upstream in accordance with the ATS-16 A input 16 A breakers.

Disconnecting devices must be provided in building installations and other locations.

All protection devices (circuit breakers and fuses) placed upstream of the ATS-16 A input and downstream to ATS-16 A output line have to be installed for the protection of both the cables and the equipment and in coordination with both ATS-16 A input protection (fuses) and ATS-16 A overload capacities.

IF THE ATS-16 A'S OVERLOAD CAPACITIES ARE EXCEEDED, THE UNIT WILL CUT-OFF THE OUTPUT LOAD.

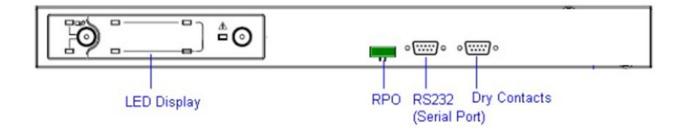

WARNING

DEPENDING ON THE OVERLOAD CHARACTERISTICS, THE ATS-16 A WILL EITHER TRIP THE INPUT FUSES OR DRIVE THE INTERNAL POWER RELAYS INTO THE OPEN POSITION.

3.7. Description of the system

The 2-pole ATS-16 A is a two-way, single phase automatic switch powered by two independent synchronous or asynchronous AC power supply sources.

The ATS-16 A makes a rapid switch from one source to the other in the event of a fault to the power supply used to power the load.

One of the two sources can be designated as the preferred power supply, to which the ATS-16 A will transfer the load. It remains there until different designations or faults require it to be switched to the other source.

The ATS-16 A is fitted with a block diagram with LED indicators, capable of providing all the information concerning equipment operation status, together with the power source priority selection button BP2 needed to enable trained operators to make full use of the apparatus.

Features:

- Break Before Make transfer mode.
- Back feed protection (according EN62310-1).
- Complete overload and short-circuit protection. (With FUSE Holder Accessible).
- Redundant power supply. (From input Source 1 and Source 2).
- AC source detection (voltage and current detection).
- Output detection (current detection).
- LED display.
- Integrated EPO contact
- Different setting to adjust the voltage failure sensing level (+/- 12% ~ +/- 20%).
 (Default setting: Nominal voltage +/- 12%).
- Protection: IP30.
- ON/OFF for Buzzer
- Selectable Nominal Frequency
- RPO active (open): output not supplied.

4. Manual Switch ON Procedures

4.1. First Switch on from Source A

- Check that all switches are OFF and check the EPO status.
- Connect the mains for source A.
- Wait for several seconds until the logic is enabled and the LEDs on the display are switched ON.
 - Priority LED PS1 or PS2 depending on the default setting.
 - o LED S1
 - o LED SW1
- Connect the mains for source B.
- The following LEDs are illuminated:
 - o Priority LED PS1 or PS2 depending on the default setting.
 - o LED S1
 - o LED S2
 - LED SW1 or SW2 according to the primary source

4.2. First Switch on from Source B

- Check that all switches are OFF and check the EPO status.
- Input the mains for source B.
- Wait for several seconds until the logic is enabled and the LEDs on the display are switched ON.
 - o Priority LED PS1 or PS2 depending on the default setting.
 - o LED S2
 - LED SW2
- Connect the mains for source A.
- The following LEDs are illuminated:
 - o Priority LED PS1 or PS2 depending on the default setting.
 - o LED S1
 - o LED S2
 - \circ LED SW1 or SW2 according to the primary source

4.3. Switch OFF

WHEN THIS PROCEDURE IS CARRIED OUT THE LOAD IS NO LONGER SUPPLIED BY THE ATS-16 A.

5. Troubleshooting

If problems should occur, please check the following points before contacting the appropriate customer service representative:

- Is the mains voltage present at the ATS-16 A input?
- Has one of the two input fuses tripped or open?

When contacting the ABB customer service representative, please have the following information ready:

- Device information (model name and serial number)
- An exact description of the problem (what loads are being operated, does the problem occur regularly or sporadically, etc.)

5.1. Fault identification and rectification

Problem	Possible Cause	Measure
No display, no alarm.	Mains or feeding UPS units switched off.	Switch on the mains or feeding UPS units.
	No mains voltage present.	Have the mains inspected by a qualified electrician
	Input fuses tripped.	Check and make sure the load capacity is within the specification, then replace with new fuse. If the problem persists, contact the appropriate customer service representative.
Both mains indicator S1 and S2 do not illuminate, when mains voltage present.	Both input fuses tripped.	Check and make sure the load capacity is within the specification, then replace with a new fuse. If the problem persists, contact the appropriate customer service representative.
Alarm indicator F1 illumi- nates, acoustic alarm acti-	ATS-16 A Fault.	Contact the appropriate customer service representative.
vates with a 0.5 second sequence.	EPO	Check all loads and solve (clear) the problem that caused the EPO.
	Overheating	Check and make sure the load capacity is within the specification or decrease ambient temperature (has to be less than 40 °C).
