RND KWR Series

Programmable DC Power Supply

Table of Contents

Product Features	3
Front Panel Description	4
Rear Panel Description	5
Characteristics of the Voltage Output	7
Specifications	8
The External Size of the Power Supply	9
Communications	10

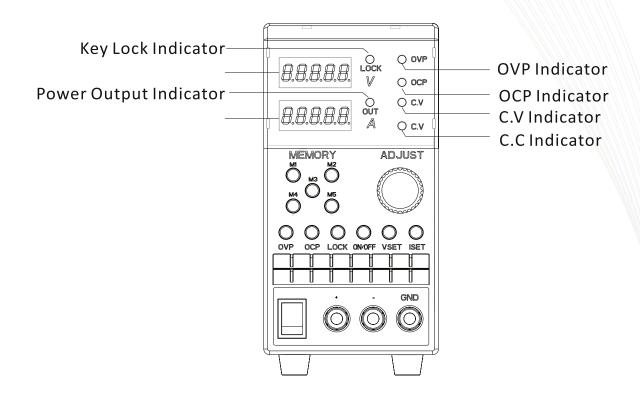

Product Features

- 0-30V/0-60V, 0-30A/0-15A, 300W wide range output
- 5-digit current and voltage display with high accuracy
- The voltage output slope can be set
- Convenient fast recall
- The OCP & OVP parameters can be set
- Various control interfaces: LAN, USB, RS232 & USB
- Supporting the stand-alone dynamic output mode

Product Series

Front Panel Description

- Press: set the OVP value and then press again to exit and save Press and hold: open the external trigger; meanwhile, there is a decimal point after the last
- Press: set the OCP value and then press again to exit and save
 Press and hold: open the external compensation; meanwhile, there is a decimal point after the last number of the current display
- Press: turn ON/OFF the touch tone Press and hold: lock the buttons
- Press and hold: set dynamic value and there will be 15 dynamic modes plus or minus M1-M5;

O: set the times of repetition and the dynamic numbers (1-15); 1-15: set the dynamic voltage and current value, and switch to set the dynamic slope and time by pressing the knob; press and hold to exit and save.

Flashing the cursor while setting the voltage

Flashing the cursor while setting the current

Press: recall MI - MS

Press and hold: save MI - MS

ADJUST

Press: turn off the flashing while setting Press and hold: set the slope and press again to exit the setting. And the unit is V/IOOuS.

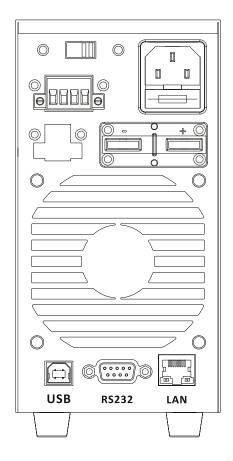

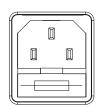

Front output terminal: the max output current of the secondary terminal is IOA. And the output of the power supply will be automatically cut off if the current exceeds IOA.

Rear Panel Description

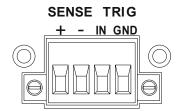

AC Input

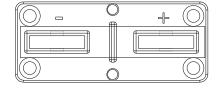

AC input 115V/230V switch

SENSE: Remote Monitoring Port

TRIG: trigger port

Output terminal, max output current 30A

USB

USB communication port

RS232 communication port

Ethernet communication port

LAN

Characteristics of the Voltage Output

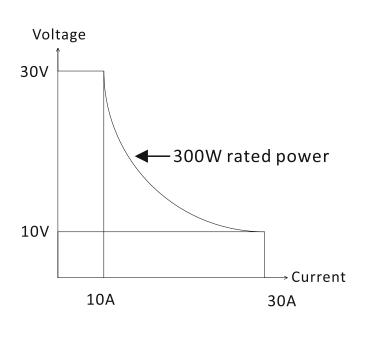

The KWR power supplies are regulated DC power supplies with a high voltage and current output. These operate in CC or CV mode within a wide operating range limited only by the output power.

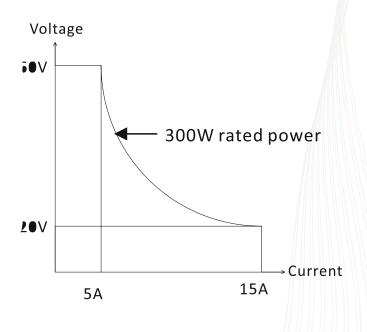

The operating area of each power supply is determined by the rated output power as well as the voltage and current rating.

When the power supply is configured so that the total output (current x voltage output) is less than the rated power output, the power supply functions as a typical constant current, constant voltage power supply.

If however, the power supply is configured such that the total output (current x voltage output) exceeds the rated power output, the effective output is actually limited to the power limit of the unit. In this case the output current and voltage then depend purely on the load value.

Below is a comparison of the operating areas of each power supply.

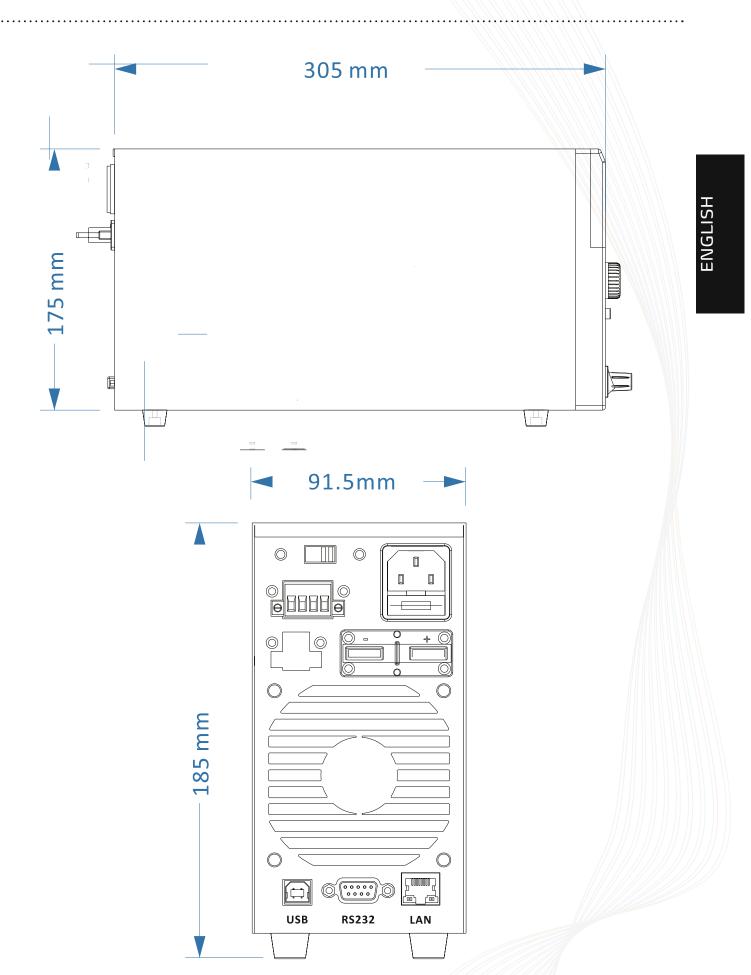

Note: the specifications below are tested under the conditions of temperature $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$ and the warm-up for 5 minutes.

Communications

ISET1:10.5

Set the current to 10.SA

ISET1?

Query the current setting value of the current

VSET1:12.5

Set the voltage to 12.SV

VSET1?

Query the current setting value of the voltage

IOUT1?

Query the current output value of the current

VOUT1?

Query the current output value of the voltage

BEEP:

BEEP:1 turn on the buzzer, BEEP:0 turn off the buzzer

OUT:

OUT:1 turn on the output,OUT:0 turn off the output

STATUS?

Query the device status BITO:CV,BITI:CC, BIT4:the buzzer, BIT5:LOCK,BIT6,the output status

*IDN?

Query the serial No. of the device

RCL5

Recall M5 as the current value (the value is 1-5)

RCL6

Recall LIST dynamic value

SAVS

The current value is stored in M5 (the value is 1-5)

OCP1:12.5

Set the OCP current value to be 12.5 A

OCP1?

Query the OCP current value

OVP1:15.5

Set the OVP voltage value to be 15.5 V

OVP1?

Query the OVP voltage value

VSLOPE1:31.5

Set the output voltage slope to be 31.5V/100µs

VSLOPE1?

Query the output voltage slope

LIST 100:25:6

Set the times of repetitions of LIST to be 25 and LIST sets 6 dynamic values

LIST:100?

Query the times of repetitions of LIST and the number of dynamic values

LIST102:25.6,2.5:6.5:5.8

Set the second dynamic value of LIST: voltage to be 25.6V, current 2.5A, slope 6.5V/ 100µs and time 5.8s. Query the voltage, current, slope and time of the second dynamic value of LIST

LIST102?

Query the voltage, current, slope and time of the second dynamic value of LIST **EXIT1**.

EXIT1:0 turn off the external trigger, EXIT1:1 turn off the external trigger

EXIT1?

Query the status of the external trigger

COMP1:

COMP1:0 turn off the external compensation, COMP1:1 turn on the external compensation

COMP1?

Query the status of the external compensation

LOCK:

LOCK: 0 unlock the buttons, LOCK: 1 lock the buttons

Frontpanel Beschreibung

Drücken: setzen Sie den OVP Wert (**Überspannungs-Schutz**) und drücken Sie erneut zum Speichern und Schließen.

- Gedrückt halten: öffnet den **externen Trigger**; währenddessen ist ein Dezimalpunkt hinter der letzten Ziffer des aktuellen Displays zu sehen
- Drücken: setzen Sie den OCP Wert (**Überstrom-Schutz**) und drücken Sie erneut zum Speichern und Schließen.
 - Gedrückt halten: öffnet die **externe Kompensation**; währenddessen ist ein Dezimalpunkt hinter der letzten Ziffer des aktuellen Displays zu sehen
- Drücken: schaltet die **Tastentöne** AN/AUS Gedrückt halten: Aktiviert die **Tastensperre**
- Gedrückt halten: setzen Sie den dynamischen Wert. Es sind 15 dynamische Modi

O: setzt die Zahl der Wiederholungen und die Dynamik-Werte (1-15); 1-15: setzt die dynamischen Spannungs- und Strom-Werte; um die dynamische

Steigung und Zeit einzustellen, drücken Sie erneut auf den Knopf; Gedrückt halten: Speichern und Exit.

Blinken des Cursors beim Einstellen der Spannung

Blinken des Cursors beim Einstellen des Stroms

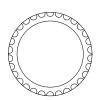

Drücken: Abruf von M1 - M5

Gedrückt halten: speichere M1 - M5

ADJUST

Drücken: schaltet das Blinken beim Einstellen ab Gedrückt halten: Steigung einstellen. Zum Verlassen erneut drücken. Die Einheit beträgt V/IOOµs.

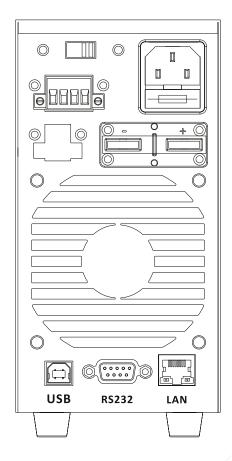

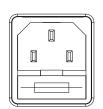

Vordere Ausgangsbuchsen: der maximale Ausgangsstrom beträgt 10 A. Bei Überschreitung dieses Limits tritt die automatische Strombegrenzung in Kraft.

Rückseite

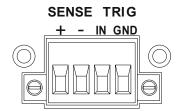

AC Eingang

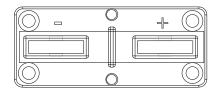

Umschalter 115V / 230V AC

SENSE: Remote Monitoring Port

TRIG: Trigger Port

Sekundärausgang 30 A DC

USB

USB Port

RS232 serieller Port

Ethernet Port

LAN

Charakteristik des Spannungsausgangs

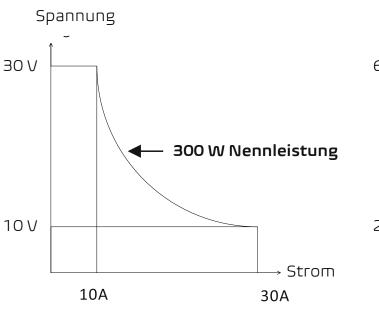

Die KWR-Netzteile sind geregelte DC-Netzteile mit leistungsstarkem Spannungs- und Stromausgang. Diese arbeiten im Konstantstrom (CC)- oder Konstantspannung (CV)-Modus innerhalb eines großen Betriebsbereichs, der nur durch die Ausgangsleistung begrenzt ist.

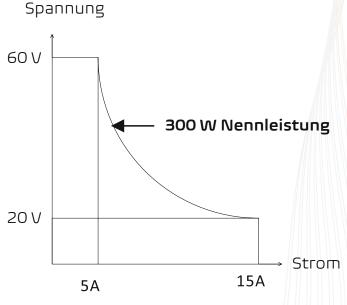

Der Betriebsbereich jeder Stromversorgung wird durch die Nennausgangsleistung sowie die Spannungs- und Strombelastbarkeit bestimmt.

Wenn die Stromversorgung so konfiguriert ist, dass die Gesamtleistung (Strom x Spannungsausgang) kleiner als die Nennleistung ist, funktioniert die Stromversorgung als typische Konstantstrom- und Konstantspannungsversorgung.

Wenn jedoch die Stromversorgung so konfiguriert ist, dass die Gesamtleistung (Strom x Spannungsausgang) die Nennleistung übersteigt, wird die effektive Leistung tatsächlich auf die Leistungsgrenze des Gerätes begrenzt. In diesem Fall sind Ausgangsstrom und -spannung dann rein vom Lastwert abhängig.

Nachfolgend finden Sie einen Vergleich der Betriebsbereiche der einzelnen Stromversorgungen.

KWR102

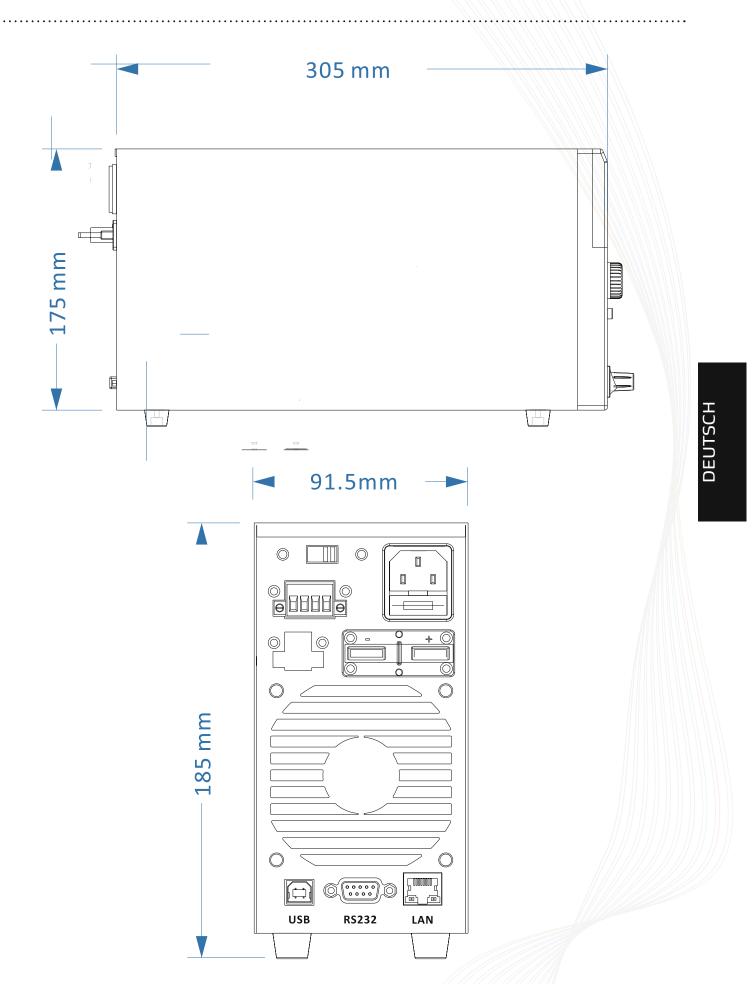

KWR103

Hinweis: Die dargestellten Spezifikationen wurden bei 25°C \pm 5°C und einer Aufwärmzeit von >5 Minuten gemessen.

VSET1? Abfrage des aktuell gesetzten Spannungs-Wertes
IOUT1? Abfrage des aktuellen Ausgangsstroms
VOUT1? Abfrage der aktuellen Ausgangsspannung
BEEP: Summer Ein-/Ausschalten: BEEP:1 AN, BEEP:0 AUS
OUT: Ausgang ein-/ausschalten: OUT:1 AN, OUT:0 AUS
STATUS? Abfrage des Geräte-Status: BITO:CV, BITl:CC, BIT4:Summer, BIT5:LOCK, BIT6, Output Status
*IDN? Abfrage der Seriennummer des Gerätes
RCL5 M5 aufrufen und als aktuellen Wert verwenden (Werte 1-5 möglich)
RCL6 Aufruf LIST dynamische Werte
SAV5 Speichern des aktuellen Wertes in M5 (Werte 1-5 möglich)
OCP1:12.5 Setze den OCP Strom auf 12.5 A
OCP1? Abfrage des aktuellen OCP Strom-Wertes
OVP1:15.5 Setze die OVP Spannung auf 15.5 V
OVP1? Abfrage der OVP Spannung

VSLOPE1:31.5.... Steigung der Ausgangsspannung auf 31.5V/100µs setzen VSLOPE1?..... Abfrage des Spannungs-Anstiegs LIST 100:25:6 Einstellung der ersten LIST-Werte auf 25 Wiederholungen und 6 dynamische Werte LIST:100? Abfrage der Werte von LIST und der Zahl der dynamischen Werte LIST102:25.6,2.5:6.5:5.8 Setzt den zweiten dynamischen Wert von LIST: Spannung=25.6V, Strom=2.5A, Steigung=6.5V/100µs und Zeit=5.8s. Abfrage von Spannung, Strom, Steigung und Zeit des zweiten dynamischen Wertes von LIST LIST102?..... Abfrage von Spannung, Strom, Steigung und Zeit des zweiten dynamischen Wertes von LIST **EXIT1**:... EXIT1:0 externer Trigger AUS, EXIT1:1 externer Trigger AN **EXIT1?....** Gibt den Status des externen Triggers zurück COMP1:.... COMP1:0 externe Kompensation AUS, COMP1:1 externe Kompensation AN **COMP1?** Gibt den Status der externen Kompensation zurück

Tastensperre AN

LOCK:LOCK:O Tastensperre AUS,

LOCK:1
