## SIZE AND INSTALLATION

## SETPOINT MODIFICATION

PRESS	DISPLAY
1	Visualizes SETPOINT 1 / 2
2	Modifies selector SET

LED	MEANING
Q1	Report the activation of Q1
Q2	Report the activation of Q2
RS	Report serial transmission by the TI484801

## TECHNICAL DATA

**Operating temperature** 0-40°C, humidity temperature 35..95uR%

**Sealing** IP65 (with gasket) on front panel, IP20 box and terminal blocks

**Material** PC ABS UL94V0 self-extinguishing

**Digital Inputs** 3PNP/NPN configurable as analogue for potentiometers.(max 28 Vdc in PNP mode)

**Outputs** 2 relays 8A resistive charge  
**OUT 24V** 30mA(24Vac),40mA(24 Vdc),60mA (110...230Vac)

**Back-UP** Rechargeable battery, approx. 60days autonomy

**Power Supply** 24...230Vac/Vdc +/-15% 50/60Hz / 2W

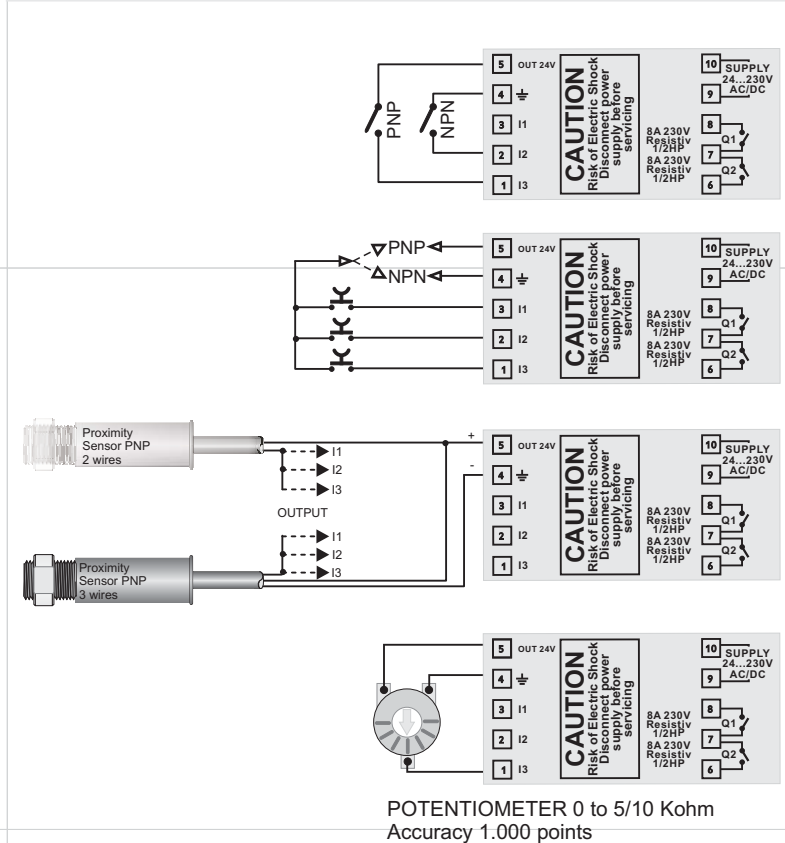

## INTRODUCTION

Thanks for choosing a Wachendorff device.  
The timer TI484801 can be set in 5 different modes; Timer-ON, Timer-OFF, Pause-Work, Oscillator, PWM (time-proportioned output), all options with independent settings of ON-OFF time.  
3 universal digital inputs are availables (NPN/PNP/Potential free contact) for external commands like Start, Stop and Reset; one input is also analogue in order to allow the modification of working times by an external potentiometer.  
5 different time bases (hundredths, tenths, seconds, minutes, hours).  
Counting can be incremental or decremental.

Read carefully the safety guidelines and programming instructions contained in this manual before using/connecting the device.  
Disconnect power supply before proceeding to hardware settings or electrical wirings.  
Only qualified personnel should be allowed to use the device and/or service it and in accordance to technical data and environmental conditions listed in this manual.  
Do not dispose electric tools together with household waste materials in observance of European Directive 2002/96/CE

## WIRING DIAGRAM

**Potentiometer:**  
To modify Set1 or Set2 by external potentiometer follow the steps below:  
1- use potentiometers 0 to 5/10kohm  
2- connect cursor to pin I3; a wrong connection may damage the potentiometer and lead to lock of the device.  
3- accuracy on input is max 1000 points, therefore set the parameters "Upper limit" and "Lower limit" with a max difference of 1000 units.  
(Ex.: LoS1 to 50,0 and uPS1 to 150,0 to modify time value related to Set1 between 50 and 150 seconds with steps of one tenth). Greater differences would make unstable the less significant digit.  
4- To calibrate the scale of potentiometer enter the configuration mode and select:  
Hin.3 as Pot  
Fin.3 as Set1 or Set2  
P.tAr as Enable  
Exit configuration mode and place potentiometer at minimum level and press [0] key, then place potentiometer at max level and press [SET] key: the device automatically exit the calibration procedure.  
N.B.: A switch-off of the device would interrupt the calibration.

## MEMORY CARD (optional)

Parameters and setpoint values can be copied from one device to another using the Memory card. **Attention: Pls. perform an update of the memory card first.**  
There are two methods:  
> **With the device connected to the power supply** insert the memory card **when the controller is off.**  
On activation display 1 shows and display 2 shows (Only if the values stored on Mmemory Card are correct).  
By pressing the [0] key display 2 shows .  
Confirm using the [0] key .  
The device loads the new data and starts again.  
> **With the controller disconnected from the power supply:**  
The memory card is equipped with an internal battery with a life of about 1000 uses.  
Insert the memory card and press the programming button.  
When writing the parameters, the LED turns red and on completing the procedure it changes to green. It is possible to repeat the procedure.

## UPDATING MEMORY CARD.

To *update* the memory card values, follow the procedure described in the first method, setting display 2 to so as not to load the parameters on controller.  
Enter configuration and **change at least one parameter.**  
Exit configuration. Changes are saved automatically.

## LOADING DEFAULT VALUES

PRESS	DISPLAY	DO	
1	SET for 3 seconds	On display 1 appears  with 1st digit blinking, while display 2 shows	
2	[0] or [1]	Modify blinking digit and pass to the next one pressing [0]	Enter Password
3	[SET] to confirm	Device loads default values	Switch the device off and restart it

## CONFIGURATION PARAMETER MODIFICATION

PRESS	DISPLAY	DO	
1	SET for 3 seconds	On display 1 appears  with 1st digit blinking, while display 2 shows	
2	[0] or [1]	Modify blinking digit and pass to the next one pressing [0]	Enter Password
3	[SET] to confirm	Display shows first parameter of configuration table	
4	[0] or [1]	Scroll parameters	
5	[SET] + [0] or [1]	Increase or decrease visualized value pressing [0] and an arrow key	Enter the new data that will be saved when releasing keys
6	[0] + [1]	End configuration, controller exits from configuration

## TABLE of ERROR MESSAGES

- E-01** ERROR WRITING EEPROM Memory (Nota 1)
- E-02** ERROR READING EEPROM Memory (Nota 1)
- E-03** Incorrect parameters (Nota 1)
- E-04** Incorrect calibration data (Nota 1)
- E-05** Incorrect status data (Nota 1)
- E-06** Incorrect BACKUP registers (Nota 2)

Note 1:  
Switch the device off and restart it; if error is still notified, contact technical service

Note 2:  
Discharged battery; keep the device connected to power supply in order to recharge the battery.

Note 1: In this timer functioning, if P-06 Active State Input 1 = Rising Edge or P-09 Function Input 1 = Disable, at count end (reaching setpoint), timer will switch automatically to STOP.

Note 2: This function not reset timer value, and so it requires an input for the reset.

Note 3: This function reset timer at STOP.

Note 4: This function reset timer at START.

Note 5: This function è attiva solo se P-06 Active State Input 1 = Rising Edge

Δ In PWM mode, the only option available on parameters 16 **FAS1** and 17 **FAS2** for format of SET1 and SET2 is **5555** (seconds). Low and upper limits for SET1 (related to percentage of work or Duty Cycle) are allowed in the range 0 ... 100 (%).
