Model Number

OMT100-R103-2EP-IO

Distance sensor with fixed cable

Features

- Miniature design with versatile mounting options
- Space-saving distance sensors in small standardized design
- Multi Pixel Technology (MPT) exact and precise signal evaluation
- IO-link interface for service and process data

Product information

The R103 series miniature optical sensors are the first devices of their kind to offer an end-to-end solution in a small single standard design — from thru-beam sensor through to a distance measurement device. As a result of this design, the sensors are able to perform practically all standard automation tasks.

The entire series enables sensors to communicate via IO-Link.

The DuraBeam laser sensors are durable and can be used in the same way as a standard sensor.

The use of Multi Pixel Technology gives the standard sensors a high level of flexibility and enables them to adapt more effectively to their operating environment.

General specifications		
Measurement range		40 100 mm
Reference target		standard white, 100 mm x 100 mm
Light source		LED
Light type		modulated visible red light
LED risk group labelling		exempt group
Angle deviation		max. +/- 1.5 $^{\circ}$
Diameter of the light spot		approx. 8 mm at a distance of 100 mm
Angle of divergence		approx. 4 °
Ambient light limit		EN 60947-5-2 : 30000 Lux
Resolution		0.1 mm
Functional safety related paran	neters	
MTTF _d		600 a
Mission Time (T _M)		20 a
Diagnostic Coverage (DC)		0 %
ndicators/operating means		LED was an
Operation indicator		LED green: constantly on - power on flashing (4Hz) - short circuit flashing with short break (1 Hz) - IO-Link mode
Function indicator		LED yellow: constantly on - switch output active
		constantly off - switch output inactive
Control elements		Teach-In key
Control elements		5-step rotary switch for operating modes selection
Electrical specifications		40001/20
Operating voltage	U_B	10 30 V DC
Ripple		max. 10 %
No-load supply current Protection class	I ₀	< 25 mA at 24 V supply voltage
		""
nterface		IO-Link (via C/Q = BK)
Interface type Device profile		Smart Sensor
Transfer rate		COM 2 (38.4 kBaud)
IO-Link Revision		1.1
Min. cycle time		3 ms
Process data witdh		Process data input 3 Byte
010		Process data output 2 Bit
SIO mode support		yes 0v110000 (1116405)
Device ID		0x110909 (1116425) A
Compatible master port type Output		^
Switching type		The default setting is: C/Q - BK: NPN normally open, PNP normally closed, IO-L Q2 - WH: NPN normally open, PNP normally closed
Signal output		2 push-pull (4 in 1)outputs, short-circuit protected, reverse polarity protected, overvoltage protected
Switching voltage		max. 30 V DC
Switching current		max. 100 mA , resistive load
Usage category		DC-12 and DC-13
Voltage drop	U_d	≤ 1.5 V DC
Response time		2 ms
Conformity		
Communication interface		IEC 61131-9
Product standard		EN 60947-5-2
Measurement accuracy		
Temperature drift		0.03 %/K
Warm up time		5 min
·		≤ 0.5 %
Repeat accuracy		± 0,75 %
Repeat accuracy Linearity error		
Repeat accuracy Linearity error Ambient conditions		
Repeat accuracy Linearity error		conveyor chains
Repeat accuracy Linearity error Ambient conditions		10 60 °C (50 140 °F) , movable cable not appropriate
Repeat accuracy Linearity error Ambient conditions Ambient temperature Storage temperature		$10 \dots 60$ °C (50 \dots 140 °F) , movable cable not appropriate conveyor chains
Repeat accuracy Linearity error Ambient conditions Ambient temperature Storage temperature Mechanical specifications Housing width		10 60 °C (50 140 °F), movable cable not appropriate conveyor chains -40 70 °C (-40 158 °F)

Cable length 2 m Approvals and certificates **UL** approval E87056, cULus Listed, class 2 power supply, type rating 1

Preferences

Teach-In:

You can use the rotary switch to select the relevant switching threshold A and/or B for teaching in for switch signal Q1 or Q2.

The yellow LEDs indicate the current state of the selected output.

To store a threshold value, press and hold the "TI" button until the yellow and green LEDs flash in phase (approx. 1 s). Teach-In starts when the "TI" button is released.

Successful Teach-In is indicated by alternating flashing (2.5 Hz) of the yellow and green LEDs.

An unsuccessful Teach-In is indicated by rapidly alternating flashing (8 Hz) of the yellow and green LEDs.

After an unsuccessful Teach-In, the sensor continues to operate with the previous valid setting after the relevant visual fault signal is issued.

Different switching modes can be defined by teaching in the relevant distance measured values

for the switching thresholds A and B:

Single point mode:

Window mode:

Every taught-in switching threshold can be retaught (overwritten) by pressing the "TI" button again.

Pressing and holding the "TI" button for > 4 s completely deletes the taught-in value. The vellow and green LEDs go out simultaneously to indicate that this procedure has been completed. Successful resetting is indicated by alternating flashing (2.5 Hz) of the yellow and green LEDs.

Resetting to Factory Default Settings

Press the "Tl" button for > 10 s in rotary switch position ,O' to reset to factory default settings. The yellow and green LEDs go out simultaneously to indicate the resetting.

Resetting process starts when the "TI" button is released and is indicated by the yellow LED. After the process the sensor works with factory default settings, immediately.

OMT:

- Factory default settings switch signal Q1: Switch signal active, window mode

 - Switch signal active, BGS mode (background suppression)
- Factory default settings switch signal Q2: Switch signal active, BGS mode (background suppression)

Configuration via IO-Link interface

Setting different operating modes via the IO-Link interface

The devices are equipped with an IO-Link interface as standard for diagnostics and parameterization tasks to ensure optimum adjustment of the sensors to the relevant application.

Single point mode operating mode (one switch point):

- "Detection of objects irrespective of type and color in a defined detection range. Objects in the background are suppressed.
- "The switch point corresponds exactly to the set point.

Window mode operating mode (two switch points):

- Detection of objects irrespective of type and color in a defined detection range. Reliable detection when object leaves the detection range.
- Window mode with two switch points.

active detection range Foreground suppression Background suppression

Center window mode operating mode (one switch point):

- Detection of objects irrespective of type and color in a defined detection range. Sets a defined window around a given object. Objects outside this window are not detected.
- Window mode with one switch point.

Two point mode operating mode (hysteresis operating mode):

• Detection of objects irrespective of type and color between a defined switch-on and switch-off point.

Inactive operating mode:

Evaluation of switching signals is deactivated.
