# RS Pro 3 in Gripping Driver Screwdriver, Slotted 0.02 in Tip

## Product Details

### Screw Gripping Screwdrivers

Split-bladed screwdrivers for gripping slotted head screws during location and extraction

Blades have a sliding sleeve operated by a plastic collar (just below the handle) which, when pushed down, causes the blade tip to split apart and firmly wedge against the sides of the screw slot. The blade is released by pulling back the sleeve

Blade thickness is defined in the released condition

### Note

Final tightening of screw torque is best achieved by a regular screwdriver to avoid potential damage to gripping tip.

## Specifications:

Tip Type	Slotted
Tip Size	0.02 in
Screwdriver Type	Gripping Driver
Blade Length	3 in
Handle Material	Plastic
