

# SwitchBlade® x8100 Series

## With CFC960 Controller

### Next generation intelligent Layer 3+ chassis switches

Allied Telesis SwitchBlade x8100 Series Layer 3+ chassis switches, with CFC960 control cards, guarantee high performance for the large enterprise network core. Available in 6 and 12 slot models, with the ability to stack two chassis into a single virtual unit, the CFC960 based system combines resilience and scalability in a superior solution.

### High performing

The SwitchBlade x8100 Series offers an extensive range of 40, 10 and 1 Gigabit connectivity options. The CFC960 control card provides powerful processing ability ideal for the large network core, and incorporates four 1/10GbE<sup>1</sup> ports. Dual active/active CFC960 control cards provide chassis resilience, and up to 160Gbps throughput to each line card slot for maximum performance and wirespeed data delivery.

### Powerful network management

The Allied Telesis Autonomous Management Framework (AMF) meets the increased management requirements of modern converged networks, automating many everyday tasks including configuration management. AMF has powerful centralized management features that manage a complete network as a single virtual device. The network can be expanded with plug-and-play simplicity, and network node recovery is fully zero-touch.

AMF secure mode increases network security with management traffic encryption, authorization, and monitoring. AMF Guestnode allows third party devices, such as IP phones and security cameras, to be part of an AMF network.

### Total reliability

For resiliency against network failures, two chassis can be stacked together into a single virtual unit using VCStack

Plus™. This creates a powerful and completely resilient network core, which can even be distributed over long distance.

The SwitchBlade x8100 Series switches operate with a single AC or DC PSU. Installing a second load-sharing PSU provides complete power redundancy.

To minimize downtime when maintaining or upgrading the system, In-Service Software Upgrade can be used to upgrade software without interrupting network traffic, and control cards, line cards, power supplies and the fan tray are all hot-swappable.

### Scalable

Both the 6- and 12-slot chassis options provide a powerful network solution. VCStack Plus uses the 1/10<sup>1</sup> Gigabit ports on the CFC960 control cards to allow two chassis to combine as a single virtual unit.

The modular SBx81XLEM line card is extremely flexible, supporting 40, 10 and 1 Gigabit Ethernet options. It also offers increased L2 and L3 table sizes for large core applications.

The 40-port Gigabit (CSFP) line card enables high-density fiber connectivity.

There are three 24-port Gigabit line cards available: copper, PoE+, and fiber (SFP).

<sup>1</sup> 1 Gigabit connectivity is only supported on the CFC960v2 running firmware 5.4.9-1 or later

### Environmentally friendly

SwitchBlade x8100 Series switches are designed to reduce power consumption and minimize hazardous waste. Features include high efficiency power supplies and low power chip sets. An ECO-Switch button allows additional power conservation, by turning off all diagnostic LED indicators when they are not required.

## Key Features

- ▶ Allied Telesis Autonomous Management Framework™ (AMF)
- ▶ AMF secure mode
- ▶ EPSR™ and G.8032 Ring Protection
- ▶ EPSR Master
- ▶ Large tables support with XLEM line card
- ▶ Active Fiber Monitoring of fiber data and stacking links
- ▶ VLAN Mirroring (RSPAN)
- ▶ Upstream Forwarding Only (UFO)
- ▶ Bi-directional Forwarding Detection (BFD)
- ▶ Multicast Source Discovery Protocol (MSDP)
- ▶ Link Monitoring

## Key Features

### VCStack Plus™

- ▶ Two SwitchBlade x8100 chassis can be stacked together into a single virtual unit using VCStack Plus. The stacking link uses the 1/10<sup>1</sup> Gigabit front panel ports on the CFC960 control cards, which provides a massive 160 Gigabits of stacking bandwidth. VCStack Plus provides a highly available system where network resources and distribution switches are connected across the units for ultimate resiliency. Management is simplified as the two chassis operate as a single virtual unit.

### Long-distance VCStack Plus

- ▶ As the VCStack Plus links are fiber, the two chassis do not need to be collocated, but can be kilometres apart - perfect for a distributed network environment, or data-mirroring solution.

### Allied Telesis Autonomous Management Framework™ (AMF)

- ▶ Allied Telesis Autonomous Management Framework (AMF) is a sophisticated suite of management tools that provide a simplified approach to network management. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.
- ▶ Any SwitchBlade x8100 Series switch can operate as the AMF network master, storing firmware and configuration backups for all other network nodes. The AMF master enables auto-provisioning and auto-upgrade by providing appropriate files to new network members. New network devices can be pre-provisioned making installation easy because no on-site configuration is required.
- ▶ AMF secure mode encrypts all AMF traffic, provides unit and user authorization, and monitors network access to greatly enhance network security.
- ▶ AMF Guestnode allows Allied Telesis wireless access points and further switching products, as well as third party devices such as IP phones and security cameras, to be part of an AMF network.

### AMF Controller

- ▶ The CFC960 can manage AMF networks of up to 120 nodes, which can be located locally or across WAN links. This can be dramatically increased by installing the AMF Controller, which enables multiple AMF Masters to be managed from a single point. With the AMF Controller, a network of over 7,000 devices can be managed, allowing all the time saving, cost reducing benefits of AMF to be multiplied and efficiencies to be increased.

### In-Service Software Upgrade (ISSU)

- ▶ ISSU (also called "hitless firmware upgrade") allows firmware to be updated without causing any network disruption from a device reboot. This enables essential maintenance to be performed when it is required rather than having to schedule a network outage or tolerate any loss of service. ISSU is supported on dual controller systems and can be used in conjunction with VCStack Plus, making it ideal for high availability applications.

### Virtual Routing and Forwarding (VRF Lite)

- ▶ VRF Lite provides Layer 3 network virtualization by dividing a single switch into multiple independent virtual routing domains. With independent routing domains, IP addresses can overlap without causing conflict, allowing multiple customers to have their own secure virtual network within the same

physical infrastructure. VRF Lite supports both unicast and multicast traffic.

- ▶ The built-in DHCP Server on the CFC960 is VRF aware, enabling the supply of IP addresses to clients across multiple isolated networks.

### Ethernet Protection Switched Ring (EPSRing™)

- ▶ EPSRing combines with 40G or 10G Ethernet to allow several switches to form high-speed protected rings capable of recovery within as little as 50ms. This feature is perfect for high performance and high availability at the core of enterprise or provider access networks. The SwitchBlade x8100 can act as the EPSR Master.
- ▶ Superloop Protection enables a link between two EPSR nodes to be in separate EPSR domains, improving redundancy and network fault resiliency.

### G.8032 Ethernet Ring Protection

- ▶ G.8032 provides standards-based high-speed ring protection, that can be deployed stand-alone, or interoperate with Allied Telesis EPSR.
- ▶ Ethernet Connectivity Fault Monitoring (CFM) proactively monitors links and VLANs, and provides alerts when a fault is detected.

### Access Control Lists (ACLs)

- ▶ AlliedWare Plus™ delivers industry-standard access control functionality with ACLs. ACLs filter network traffic to control whether routed packets are forwarded or blocked at the port interface. This provides a powerful network security mechanism to select the types of traffic to be analyzed, forwarded, or influenced in some way.

### VLAN Access Control List (ACLs)

- ▶ ACLs simplify access and traffic control across entire segments of the network. They can be applied to a VLAN as well as a specific port.

### Industry-leading Quality of Service (QoS)

- ▶ Comprehensive low-latency wirespeed QoS provides flow-based traffic management with full classification, prioritization, traffic shaping and min/max bandwidth profiles. Enjoy boosted network performance and guaranteed delivery of business-critical Ethernet services and applications. Time-critical services such as voice and video take precedence over non-essential services such as file downloads, maintaining responsiveness of enterprise applications.

### Power over Ethernet Plus (PoE+)

- ▶ With PoE, a separate power connection to media end points such as IP phones and wireless access points is not necessary. PoE+ provides even greater flexibility, providing the capability to connect devices requiring more power (up to 30 Watts)—for example, tilt and zoom security cameras.

### VLAN Mirroring (RSPAN)

- ▶ VLAN mirroring allows traffic from a port on a remote switch to be analysed locally. Traffic being transmitted or received on the port is duplicated and sent across the network on a special VLAN.

### Active Fiber Monitoring

- ▶ Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link

can be automatically shut down, or an operator alert can be sent. Active Fiber Monitoring is supported on fiber data and fiber stacking links.

### sFlow

- ▶ sFlow is an industry-standard technology for monitoring high-speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector (up to 5 collectors can be configured) ensure it always has a real-time view of network traffic.

### TACACS+ Command Authorization

- ▶ TACACS+ Command Authorization offers centralized control over which commands may be issued by each specific AlliedWare Plus device user. It complements authentication and accounting services for a complete AAA solution.

### VLAN Translation

- ▶ VLAN Translation allows traffic arriving on a VLAN to be mapped to a different VLAN on the outgoing paired interface.
- ▶ In Metro networks, it is common for a network Service Provider (SP) to give each customer their own unique VLAN, yet at the customer location give all customers the same VLAN-ID for tagged packets to use on the wire. SPs can use VLAN Translation to change the tagged packet's VLAN-ID at the customer location to the VLAN-ID for tagged packets to use within the SP's network.
- ▶ This feature is also useful in Enterprise environments where it can be used to merge two networks together, without manually reconfiguring the VLAN numbering scheme. This situation can occur if two companies have merged and the same VLAN-ID is used for two different purposes.

### Upstream Forwarding Only (UFO)

- ▶ UFO lets you manage which ports in a VLAN can communicate with each other, and which only have upstream access to services, for secure multi-user deployment.

### Bi-directional Forwarding Detection (BFD)

- ▶ BFD enables fast detection of link failures, so recovery time is minimized. BFD works with static routes, and also alongside BGP and OSPF dynamic routing protocols supporting faster shutdown of neighbor connections if a peer session goes down. When using VRF-Lite, BFD is supported globally or within a domain.

### Multicast Source Discovery Protocol (MSDP)

- ▶ MSDP enables two or more PIM-SM (Sparse Mode) domains to share information on active multicast sources, for more efficient forwarding of multicast traffic.

### Link Monitoring (Linkmon)

- ▶ Linkmon enables network health monitoring by regularly sending probes over key links to gather metrics comprising latency, jitter, and probe loss. This supports pro-active network management, and can also be used with triggers to automate a change to device or network configuration in response to the declining health of a monitored link.

<sup>1</sup> 1 Gigabit connectivity is only supported on the CFC960v2 running firmware 5.4.9-1 or later

## Key Solutions

### Complete network core resiliency

Today's large enterprises demand ready access to online resources and applications. These needs require a high performing network, one that can seamlessly carry multiple converged services.

Two SwitchBlade x8112 chassis with dual CFC960 control cards combine to form a single virtual unit with VCStack Plus. This provides a powerful network core, with complete resiliency, and the simplicity of managing just one device. AMF allows the entire network to be unified for management, supporting plug-and-play networking with zero-touch expansion and recovery.

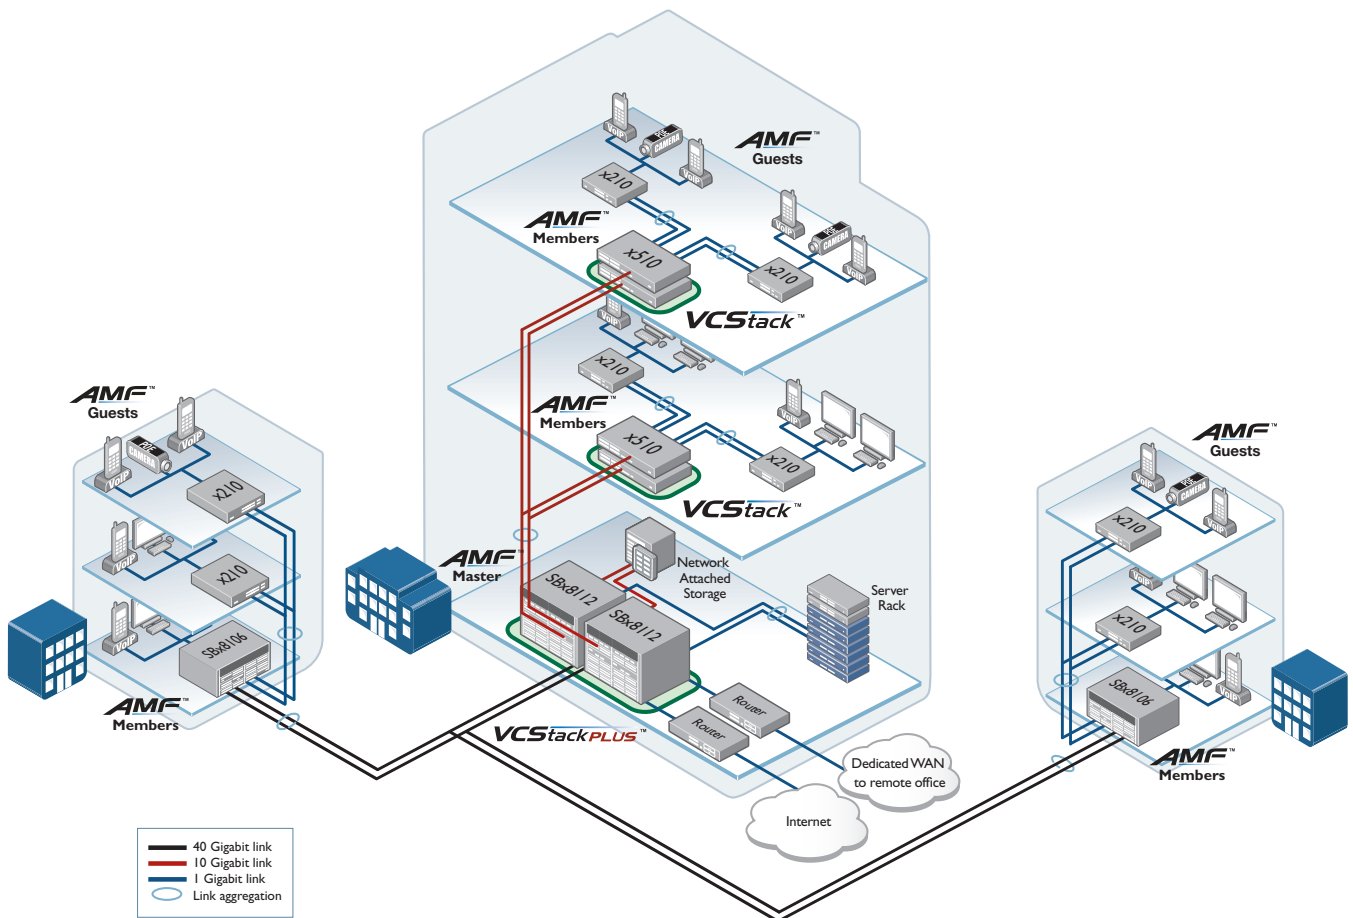

Link aggregation across the two chassis to servers, network storage, and distribution switches leaves no single point of failure in this high performing network core, ensuring device and path resiliency. Each individual chassis has PSU redundancy to ensure maximum uptime.

Hot-swappable PSUs, fan tray, control and line cards allow for system maintenance and reconfiguration with no network interruption.

SwitchBlade x8106 chassis use high-speed 40 Gigabit Ethernet to deliver traffic from other buildings.

Real-time applications like VoIP and streaming video are assured premium service on the network, as near hitless failover between the dual control cards on each SwitchBlade x8112 means there is no perceptible disruption in the case of a problem. Even if a whole chassis is powered down, access to online resources is retained without disruption.

With the benefits of high availability, increased capacity and ease of management, VCStack Plus makes large networks reliable and simple.

## Key Solutions

### Distributed collapsed backbone

As large businesses spread across multiple buildings, both onsite and across distances, their need for reliable access to online resources and applications grows. Employees expect seamless connectivity to data center services from all business locations.

Allied Telesis VCStack Plus allows two SwitchBlade x8100 chassis with dual CFC960 control cards to combine as a single virtual unit. Fiber stacking connectivity means that the two chassis do not have to be collocated, but can be kilometres apart. This provides the complete resiliency of a distributed backbone with separate physical units. It also retains the simplicity of a collapsed backbone network, with only a single virtual core chassis to manage.

The distributed collapsed backbone encompasses the best of both worlds.

With a chassis in two different locations, data center services can be mirrored for 'always-on' access, and to ensure automated disaster recovery. Each individual chassis has power and control resiliency to maximize uptime. Management of the network core remains simple, as the virtual unit formed by the two SBx8100 chassis keeps all switching and routing information completely synchronized, for zero-touch failover.

Long-distance VCStack Plus on the SwitchBlade x8100 with CFC960 control cards makes the distributed collapsed backbone a reality.

Allied Telesis build networks that guarantee data availability for the large enterprise business.

## Product Specifications

### AT-SBx81CFC960 (Controller Fabric Card)

- ▶ 2GB SDRAM
- ▶ 512KB NVRAM
- ▶ 256MB flash memory
- ▶ Up to 128K MAC addresses and 100K routes (with SBx81XLEM)<sup>1</sup>
- ▶ Up to 32K MAC addresses and 7K routes (with other line cards)<sup>1</sup>
- ▶ Up to 8K multicast entries (with SBx81XLEM)<sup>1</sup>
- ▶ Up to 2K multicast entries (with other line cards)<sup>1</sup>
- ▶ Up to 114 Link Aggregation Groups (LAGS) - any combination of static and dynamic (LACP)
- ▶ 32Mbit packet buffer memory
- ▶ 10KB L2 and 9KB L3 Jumbo frames
- ▶ 4K VLANs
- ▶ 4 x 10GbE ports for stacking or uplinks (CFC960v1)<sup>2</sup>
- ▶ 4 x 1/10GbE ports for stacking or uplinks (CFC960v2)<sup>2</sup>

### AT-SBx81GP24 (24 x 10/100/1000T PoE+ line card)

### AT-SBx81GT24 (24 x 10/100/1000T line card)

- ▶ 12Mbit packet buffer memory

### AT-SBx81GS24a (24 x 100/1000 SFP line card)

- ▶ 24Mbit packet buffer memory

### AT-SBx81GC40 (40 x CSFP line card)

### AT-SBx81XLEM (12 x 100/1000 SFP, 1 module slot line card)

- ▶ 32Mbit packet buffer memory

## Reliability

- ▶ Modular AlliedWare Plus operating system
- ▶ Redundant controller fabric cards
- ▶ Redundant 1200W AC or DC system power supplies
- ▶ Load-sharing 1200W PoE+ power supplies
- ▶ Full environmental monitoring of PSUs, fans, temperature and internal voltages. SNMP traps alert network managers in case of failure
- ▶ Over-temperature monitoring and shut down

## Expandability

- ▶ 160Gbps of stacking bandwidth
- ▶ High-speed line slots support any mix of hot-swappable cards for port flexibility
- ▶ A line card can be installed in the second CFC slot of the SBx8106 chassis for extra port density
- ▶ Premium license option for additional features
- ▶ AMF Master license options for 40, 80 and up to 120 node networks

## Flexibility and Compatibility

- ▶ Gigabit SFP ports will support any combination of Allied Telesis SFP modules listed in this document under Ordering Information
- ▶ 10G SFP+ ports will support any combination of Allied Telesis SFP+ modules and direct attach cables listed in this document under Ordering Information
- ▶ 40G QSFP+ ports will support any combination of Allied Telesis QSFP+ modules and cables listed in this document under ordering information

<sup>2</sup> To use CFC960v2 (or CFC960v2 together with CFC960v1) requires one of the following releases:

- 5.4.7-2.14 or later 5.4.7-2 release
- 5.4.8-2.9 or later 5.4.8-2 release
- 5.4.9-0.6 or later 5.4.9-x release

## Diagnostic Tools

- ▶ Active Fiber Monitoring detects tampering on optical links
- ▶ Cable fault locator (TDR)
- ▶ UniDirectional Link Detection (UDLD)
- ▶ Hardware health monitoring
- ▶ Automatic link flap detection and port shutdown
- ▶ Optical Digital Diagnostic Monitoring (DDM)
- ▶ Connectivity Fault Management (CFM)
- ▶ Continuity Check Protocol (CCP) for use with G.8032 ERPS
- ▶ Ping polling and TraceRoute for IPv4 and IPv6
- ▶ Port and VLAN mirroring (RSPAN)

## IPv4 Features

- ▶ Black hole routing
- ▶ Directed broadcast forwarding
- ▶ DNS relay
- ▶ Equal Cost Multi Path (ECMP) routing
- ▶ Policy-based routing
- ▶ Route maps and route redistribution (OSPF, BGP, RIP)
- ▶ IPv4 static unicast and multicast routing
- ▶ UDP broadcast helper (IP helper)
- ▶ Up to 64 Virtual Routing and Forwarding (VRF lite) domains (Premium license)

## IPv6 Features

- ▶ DHCPv6 relay, DHCPv6 client
- ▶ DNSv6 relay, DNSv6 client
- ▶ IPv4 and IPv6 dual stack
- ▶ IPv6 QoS and hardware ACLs
- ▶ Device management over IPv6 networks with SNMPv6, Telnetv6, SSHv6 and Syslogv6
- ▶ NTPv6 client and server
- ▶ IPv6 static unicast and multicast routing
- ▶ IPv6 Ready certified

## Management

- ▶ Autonomous Management Framework (AMF) enables powerful centralized management and zero-touch device installation and recovery
- ▶ Try AMF for free with the built-in AMF Starter license
- ▶ Eco-friendly mode allows ports and LEDs to be disabled to save power
- ▶ Industry-standard CLI with context-sensitive help
- ▶ Out-of-band 10/100/1000T Ethernet management port on the CFC front panel for ease of access
- ▶ Powerful CLI scripting engine and built-in text editor
- ▶ Comprehensive SNMP MIB support for standards-based device management
- ▶ Management via Telnet or SSH to CLI
- ▶ Event-based triggers allow user-defined scripts to be executed upon selected system events
- ▶ USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices

## Quality of Service (QoS)

- ▶ 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- ▶ Limit bandwidth per port or per traffic class down to 64kbps
- ▶ Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
- ▶ Policy-based QoS based on VLAN, port, MAC and general packet classifiers

- ▶ Policy-based storm protection
- ▶ Extensive remarking capabilities
- ▶ Taildrop for queue congestion control
- ▶ Strict priority, weighted round robin or mixed scheduling
- ▶ IP precedence and DiffServ marking based on layer 2, 3 and 4 headers
- ▶ DSCP remarking based on TCP/UDP port number

## Resiliency Features

- ▶ Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- ▶ EPSRing (Ethernet Protection Switched Rings) with SuperLoop Protection (SLP) and enhanced recovery for extra resiliency
- ▶ Bi-directional Forwarding Detection (BFD)
- ▶ Loop protection: loop detection and thrash limiting
- ▶ PVST+ compatibility mode
- ▶ STP root guard
- ▶ BPDU forwarding
- ▶ VCStack Plus enables two SBx8100 chassis with CFC960 to form a stack for ultimate resiliency and simplified management
- ▶ In-Service Software Upgrade provides hitless firmware update to prevent outages

## Security Features

- ▶ Access Control Lists (ACLs) based on layer 3 and 4 headers, per VLAN or port
- ▶ Configurable ACLs for management traffic
- ▶ ACL Groups enable multiple hosts/ports to be included in a single ACL, reducing configuration
- ▶ Auth-fail and guest VLANs
- ▶ Bootloader can be password protected for device security
- ▶ BPDU protection
- ▶ DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- ▶ Dynamic VLAN assignment
- ▶ MAC address filtering and MAC address lock-down
- ▶ Network Access and Control (NAC) features manage endpoint security
- ▶ Learn limits (intrusion detection) for single ports or LAGs
- ▶ Private VLANs provide security and port isolation for multiple customers using the same VLAN
- ▶ Secure Copy (SCP) and Secure File Transfer Protocol (SFTP)
- ▶ Strong password security and encryption
- ▶ Tri-authentication: MAC-based, web-based and IEEE 802.1x
- ▶ RADIUS group selection per VLAN or port
- ▶ TACACS+ command authorization

## Environmental Specifications

- ▶ Operating temperature range: 0°C to 40°C (32°F to 104°F). Derated by 1°C per 305 meters (1,000 ft)
- ▶ Storage temperature range: -25°C to 70°C (-13°F to 158°F)
- ▶ Operating relative humidity range: 5% to 90% non-condensing
- ▶ Storage relative humidity range: 5% to 95% non-condensing
- ▶ Operating altitude: 3,048 meters maximum (10,000 ft)

## Electrical Approvals and Compliances

- ▶ EMC: EN55022 class A, FCC class A, VCCI class A
- ▶ Immunity: EN55024, EN61000-3-levels 2 (Harmonics), and 3 (Flicker) – AC models only

**Safety**

- ▶ Standards: UL60950-1, CAN/CSA-C22.2 No. 60950-1-03, EN60950-1, EN60825-1, AS/NZS 60950.1
- ▶ Certification: UL, cUL, TUV

**Restrictions on Hazardous Substances (RoHS) Compliance**

- ▶ EU and China RoHS compliant

**Ordering Information**

**AT-SBx8112**

Rack mount 12-slot chassis with fan tray

**AT-SBx8106**

Rack mount 6-slot chassis with fan tray

**AT-SBxFAN12**

Contains four fans, temperature sensors and controller board for SBx8112 chassis

**AT-SBxFAN06**

Contains two fans, temperature sensors and controller board for SBx8106 chassis

**AT-SBx81CFC960<sup>5</sup>**

960Gbps Controller fabric card with 4 x 1/10GbE<sup>6</sup> ports

**AT-SBx81GP24**

24-port 10/100/1000T PoE+ Ethernet line card

**AT-SBx81GT24**

24-port 10/100/1000T Ethernet line card

**AT-SBx81GS24a**

24-port 100/1000X SFP Ethernet line card

**AT-SBx81GC40<sup>7</sup>**

40-port CSFP Ethernet line card

**AT-SBx81XLEM**

Modular 40G line card with 12 x 100/1000X SFP

**AT-SBx81XLEM/Q2**

2 x 40G QSFP+ expansion module for SBx81XLEM

**AT-SBx81XLEM/XS8**

8 x 1/10G SFP+ expansion module for SBx81XLEM

**AT-SBx81XLEM/XT4**

4 x 1/10G RJ45 expansion module for SBx81XLEM

**AT-SBx81XLEM/GT8**

8 x 1G RJ45 expansion module for SBx81XLEM

**AT-SBxPWRSYS2-xx**

1200W AC system power supply

**AT-SBxPWRSYS1-80**

1200W DC system power supply

**AT-SBxPWRPOE1-xx**

1200W AC PoE+ power supply

Where xx = 10 for US power cord  
 20 for no power cord  
 30 for UK power cord  
 40 for Australian power cord  
 50 for European power cord

Power cords are only shipped with AT-SBxPWRSYS2 or AT-SBxPWRPOE1 power supplies.

Note: Power entry connector is IEC 60320 C19 (High capacity)

<sup>5</sup> The CFC960v1 and v2 control cards can be distinguished by the front panel port markings. The v1 card shows only 10G, while the v2 card shows 1G and 10G speeds, as below:

<sup>6</sup> 1 Gigabit connectivity is only supported on the CFC960v2 running firmware 5.4.9-1 or later

<sup>7</sup> 5.4.9-0.1 or later F/W version required

**Accessories**

**40G QSFP+ Modules**

**AT-QSFPLR4**

40GLR4 1310 nm medium-haul, 10 km with SMF

**AT-QSFPSR4**

40GSR4 850 nm short-haul up to 150 m with MMF

**AT-QSFPSR**

40GSR 850nm short-haul up to 150 m with MMF

**AT-MTP12-1**

MTP optical cable for AT-QSFPSR, 1 m

**AT-MTP12-5**

MTP optical cable for AT-QSFPSR, 5 m

**AT-QSFP1CU**

QSFP+ direct attach cable 1 m

**AT-QSFP3CU**

QSFP+ direct attach cable 3 m

**10GbE SFP+ modules**

(Note that any Allied Telesis 10G SFP+ module can be used for stacking with the 10G ports on the CFC960)

**AT-SP10SR**

10GSR 850 nm short-haul, 300 m with MMF

**AT-SP10SR/I**

10GSR 850 nm short-haul, 300 m with MMF industrial temperature

**AT-SP10LRM**
