# DEI Demineralised Water

DEI is demineralised water supplied by Electrolube to enable small to medium users the ability to give a final "polish" to circuit boards and assemblies which have been cleaned using Electrolube Safewash and rinsed in tap water.

#### **Typical Properties**

Appearance Colourless liquid
Conductivity (mS) <3.00

<u>Description</u>	<u>Packaging</u>	Order Code	Shelf Life
Demineralised Water	1 litre plastic container	DEI01L	36 Months
	5 litre plastic container	DEI05L	36 Months

#### **Directions for Use**

DEI is an ideal product to be used in conjunction with Electrolube's TSB. TSB is an empty, refillable trigger spray with adjustable nozzle.

It is not advisable to use DEI in a container and immerse the assembly or board, as DEI may quickly become contaminated with salts from tap water or even un-rinsed residues from the initial cleaning process.

Hold the PCB or assembly at approx. 45°. Spray DEI generously onto the assembly and allow to run down the board. The PCB may be quickly dried using Electrolube Airduster (EAD).
