

DIGILENT Mini Grabber Test Clips – 240-052

These micro-hook test clips allow the Analog Discovery, Digital Discovery, or Open-Scope MZ's signal wires to be connected to component leads, wires, and other circuit components.

The spring-action clips use two-lead pincers to grab onto conductors up to 1.27mm in diameter. When released, the pincers hold tightly for good electrical contact. Sold in packs of six with a variety of colours, the micro test clips allow the Analog Discovery, Digital Discovery, and Open-Scope MZ to work with a wide variety of existing circuits.

Features

- Lightweight and durable construction
- Two signal connection points for signal wires
- Six colours
- Able to grasp conductors up to 1.27mm in diameter

Note:

The signal wires must be inserted into the test clips with their metal contacts facing outwards.
