■ Description

LDPC-50A is a laser diode driver designed as high power pulsed current source. It delivers current pulses variable from 0A to 50A with up to 2.75KW of total output power. Pulse widths can vary from 40 μ s to CW, with rise time less than 2 μ s. LDPC-50A can be externally triggered and synchronize for applications requiring special triggering and synchronization.

Pulsed Operation Diagram

1. Operate with additional aluminum plate

In order to meet the "Derating Curve" and the "Static Characteristics", LDPC series must be installed onto an aluminum plate (or the cabinet of the same size) on the bottom. The size of the suggested aluminum plate is shown as below. And for optimizing thermal performance, the aluminum plate must have an even and smooth surface (or coated with thermal grease), and LDPC series must be firmly mounted at the center of the aluminum plate.

2. For heat dissipation, at least 5cm installation distance around the PSU should be kept, shown as below:
