

Applications - Visual only - RFI

- There are varied applications, but some of the more common are:
- Plastic injection moulding equipment
- > Visual flow on heat exchangers

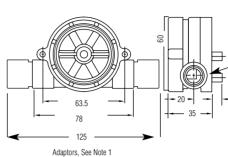

Applications - Switch/Analogue Output - RFO & RFA

- Lasers
- Medical Equipment
- ► X-Ray Tubes
- Computers
- Robotic Welding Equipment
- Water Purification/ Dispensing Systems

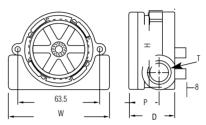

Chemical Metering Equipment

- Water Sampling
- ► Ice Making Machinery
- Water Injection Systems
- Proof of Delivery Systems

Polypropylene Bodies

Metal Bodies

т	W	Н	D	P
1/4	77	60	35	20
1/2	77	60	35	22
3/4	100	66	51	27
1	100	66	51	27

Notes:

- 1. Adaptors are supplied fitted to plastic units, sealed using Teflon (PTFE) tape.
- 2. If NPT thread is required for plastic units discard adaptor.
- 3. For pressure drop curves see RFS page.

OEMS

Specialist designs are available based on your requirements. Please contact Sales Office for further details on options such as potable water, enhanced chemical capabilities or 4-20mA loop powered units.

This is RotorFlow in its most basic form – a **BRIGHT ORANGE ROTOR** turning with fluid flow. Simple, direct and reliable.

Flow rate is estimated, or simply confirmed, by viewing the speed of the turning rotor. Either port may be used for incoming flow, and new bayonet mounting lens is easily removed for quick cleanout. RFI Type RotorFlow sensors are easy to see, easy to install and easy to afford.

RotorFlow - RFO and RFA Types

4.5 - 24 VDC Pulsed Output - RFO

0 - 10 V, RFA

Gems Sensors popularised the Rotor-Flow's paddlewheel design by combining high visibility rotors with solid-state electronics that are packaged into compact, panel mounting housings. They provide accurate flow rate output with integral visual confirmation ... all with an unprecedented price/performance ratio.

Hall-Effect-Sensor sends a voltage pulse with each pass of magnetic field

Specifications

Wetted materials Body Rotor pin Rotor Lens O-Ring	Polypropylene (Hydrolytically Stable, Glass Reinforced), Stainless Steel or Brass Ceramic Ryton Composite, Colour: Black Polysulfone Buna N (Metal body = Viton)			
Max. operating pressure	Polypropylene Body: 7 bar Metal Body: 14 bar			
Max. operating temperature	Polypropylene Body: Metal:	80 °C 100 °C		
Electronics (both bodies)	65 °C Ambient			
Max. viscosity	45 cSt			
Input power	4.5 to 24 Vdc, (24Vdc Regulated Supply for RFA models)			
Output signal	4.5 to 24 Vdc Pulse, Pulse Rate dependent on Flow Rate, Port Size and Range 0 to 10 V, available (RFA model), consult Sales Office			
Max. current source output	70 mA			
Frequency output range	25 Hz (Low Flow) to 225 Hz (High Flow)			
Electrical termination	AWG 22 PVC-Jacketed Cable, Length 60 cm Colour Code: Red = + Vdc, Black = Ground, White = Signal output			
Typical pressure drop	See Graphs			

How to Order

High Resolution Black Rotor

Ryton composite. Each of the six rotor arms are magnetized.

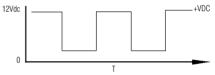

Signal Output

Output signal for RFO Types is an on/off pulse of the DC voltage supplied to the unit, it is compatible with all digital logic families. Input voltage range is 4.5 to 24 Vd.c.

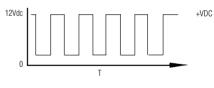

Frequency of the output pulse is proportional to the flow rate and ranges from approximately 25 Hz at low flow to 225 Hz at high flow. See order number for more information.

Following examples are at 12Vdc supply

Low Flow

HighFlow

* With use of Low-Flow-Adapter supplied. See page 70 for more information. For dimensions see page RFS Please consult factory for detailed flow rate / frequency curves.

RotorFlow - RFS Types Flow Setpoint Switching

RotorFlow Switches build an extra level of reliability and protection into your equipment. By principle of operation, the rotor cannot be deceived into indicating a positive flow situation when no flow actually exists. Once set to a desired actuation point, RotorFlow will switch to a 'no-flow' condition should the rotor stop for any reason.

Switch Set Point Calibration With LED Signal (RFS Type)

With the unit installed in the line and power supplied, complete the following steps to calibrate switch actuation point with proper flow rate. A small flat-blade screwdriver is the only tool required.

1. Adjust liquid flow in the line to the rate at which

High Flow Units

Installation and Maintenance

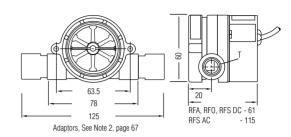

A proper installation will enhance RotorFlow sensor performance. Install using standard pipe fitting tools; horizontal fluid lines are recommended. For further installation and maintenance recommendations, refer to one of the following instruction bulletins: RFO Types - Part Number 157258; RFI Types - Part Number 157269; RFS Types - Part Number 157261. Since their function is to monitor dynamic fluid flow, naturally the rotor will react to turbulence, pulsation, entrained air, and other flow anomalies induced in the flow stream by other process hardware. For optimum performance, install RotorFlow units where nominal flow conditions exist with ports located at the top. Incoming flow may be placed to either port; a minimum of 20 cm of straight pipe on the inlet side is required. When operating in the low flow range, the supplied Low Flow Adapter must be installed in the incoming port.

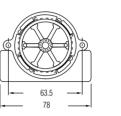

RotorFlow sensors connect to piping via NPT mating thread forms. The use of an appropriate thread sealant is necessary to assure a leak-tight connection. Permatex "No More Leaks" or 2 wraps of Teflon tape are the only sealants recommended for GEMS flow sensors. 150 micron filtration is recommended. However, should foreign particles enter RotorFlow sensor, accumulation is easily cleared by removing the lens from the body. The lens is removed by turning its centre rib 45° counter-clockwise, and then pulling it out. To reinstall the lens, simply reverse the process.

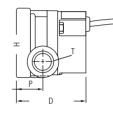

Dimensions (in mm)

RFA, RFO, RFS Polypropylene Bodies

Metal Bodies

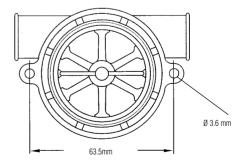

Т	W	Η	D DC models	D AC models	P
1/4	77	60	61	114	20
1/2	77	60	61	114	22
3/4	100	66	75	121	27
1	100	66	75	121	27

Panel Mounting

Any RotorFlow sensors may be panel mounted using holes integrated into the bodies.

Two (2) mountings ears are provided at the body centre line to receive 3.5mm ø self tapping screws (e.g. DIN 7971-B 3, 5 x 19) to accommodate panel mounting of the plastic RotorFlow units.

Note: ANSI T type 23 self-tapping screw are recommended. They may be replaced with standard machine screws if reinstallation should be required.

Important: In either case, pressure must be relieved from the system prior to sensor clean-out.

Low Flow Applications

A low flow adaptor is supplied with all Rotorflow units. It is used to produce accurate response at low flow rates. Install the adapter, as shown above, in the port selected for incoming flow.
