

Conductive Assortment Box

Image shown for
illustration
purposes only.

Description

Box is made of conductive polypropylene with a surface resistivity of approximately 5×10^3 ohm per square and a volume resistivity of about 10^4 ohm cm providing an excellent shield against electrostatic fields as defined in IEC 61340-5. They are suitable for primary packaging of electrostatic sensitive devices that do not have a built-in power source.

Features

- Black conductive polypropylene box with hinged lid
- Supplied empty
