## Fuse Systems <br> NEOZED Fuse Systems

## Introduction

## Overview

The NEOZED fuse system is primarily used in distribution technology and industrial switchgear assemblies. The system is easy to use and is also approved for domestic installation.
The MINIZED switch disconnectors are primarily used in switchgear assemblies and control engineering. They are approved for switching loads as well as for safe switching in the event of short circuits. The MINIZED D02 is also suitable for use upstream of the meter in household applications in compliance with the recommendations of the VDEW according to TAB.

Due to its compact design, the MINIZED D01 fuse switch disconnector is primarily used in control engineering.
The NEOZED fuse bases are the most cost-effective solution for using NEOZED fuses. All NEOZED bases must be fed from the bottom to ensure that the threaded ring is insulated during removal of the fuse link. The terminals of the NEOZED bases are available in different versions and designs to support the various installation methods.

Benefits

(1) NEOZED D02 bus-mounting base for 60 mm busbar system, with NEOZED screw cap
(2) NEOZED D02 bus-mounting switch disconnector for 60 mm busbar system
(3) MINIZED D01 fuse switch disconnector
(4) MINIZED D02 switch disconnector
(5) NEOZED comfort base, 1-pole (fuse base with touch protection BGV A3), with NEOZED screw cap
(6) NEOZED comfort base, 3-pole (fuse base with touch protection BGV A3), with NEOZED screw cap
(7) NEOZED adapter sleeve
(8) NEOZED fuse link

Compared to the older DIAZED fuse system, the NEOZED fuse system is significantly more modern:

- Much more compact which saves space in the distribution board
- Modern devices like the MINIZED switching devices, which combine the functions of a switch disconnector and a fuse base
- Wide range of accessories, such as busbars for one, two, or three-phase wiring
- Modern terminals for MINIZED D02 and NEOZED comfort bases: Visible, clear and controllable connection simplifies cable entry

Double terminal chambers permit connection of two wires of different cross-sections

- Lower power loss of the fuse links

Even when compared to the internationally prevalent cylindrical fuse system, the NEOZED fuse system has considerable advantages:

- Non-interchangeability - thanks to use of adapter sleeves (i.e. it is not possible to insert a fuse for larger currents). This is a requirement of numerous wiring regulations in Germany and other European countries
- Switching devices with load switching characteristics allow the safe switching of load currents up to 63 A

Technical specifications

Fuse Systems
NEOZED Fuse Systems
Introduction
More information

D01 fuse bases, with terminal version BB

- Incoming feeders, clamp-type terminal B
- Outgoing feeders, clamp-type terminal B

D02 fuse bases, with terminal version SS

- Incoming feeders, saddle terminal S
- Outgoing feeders, saddle terminal S

D02 fuse bases, with terminal version KS

- Incoming feeders, screw head contact K
- Outgoing feeders, saddle terminal S
