

DCSSR Unit

SKU:U140

Description

Unit DCSSR is a **DC to DC** single phase solid state relay controller kit, comes with a single phase solid state relay + ESP32C3 controller board. Supports **key control** , **I2C slave** , and **Modbus networking** modes of operation. Integrated programmable full-color RGB LED for for state indication, clear to operate. This kit is contactless and adopts semiconductor switching elements. It has several advantages such as high switching speed, extremely long life, low switching noise, no switching spark and ultra-reliable than most mechanical relays. Widely used in digital program control devices, motor control devices, temperature control, data processing systems and computer peripheral interface devices. **It is specially designed for harsh environments with corrosion, humidity or explosion-proof requirements and frequent turn-on/off requirements .**

Features

- Single-phase solid state relay
- Three operating modes. - Push button control - I2C slave (support device I2C address configuration) - Modbus networking (supports device ID configuration)
- Programmable full color RGB LED
- RS485PWR interface (support input 9-24V to power the device)

Includes

- 1x Single Phase Solid State Relay
- 1x UNIT DCSSR
- 1x HY2.0-4P Cable (20cm)
- 1x Communication protocol manual
- 2x 3.96-4P Terminal Block

Applications

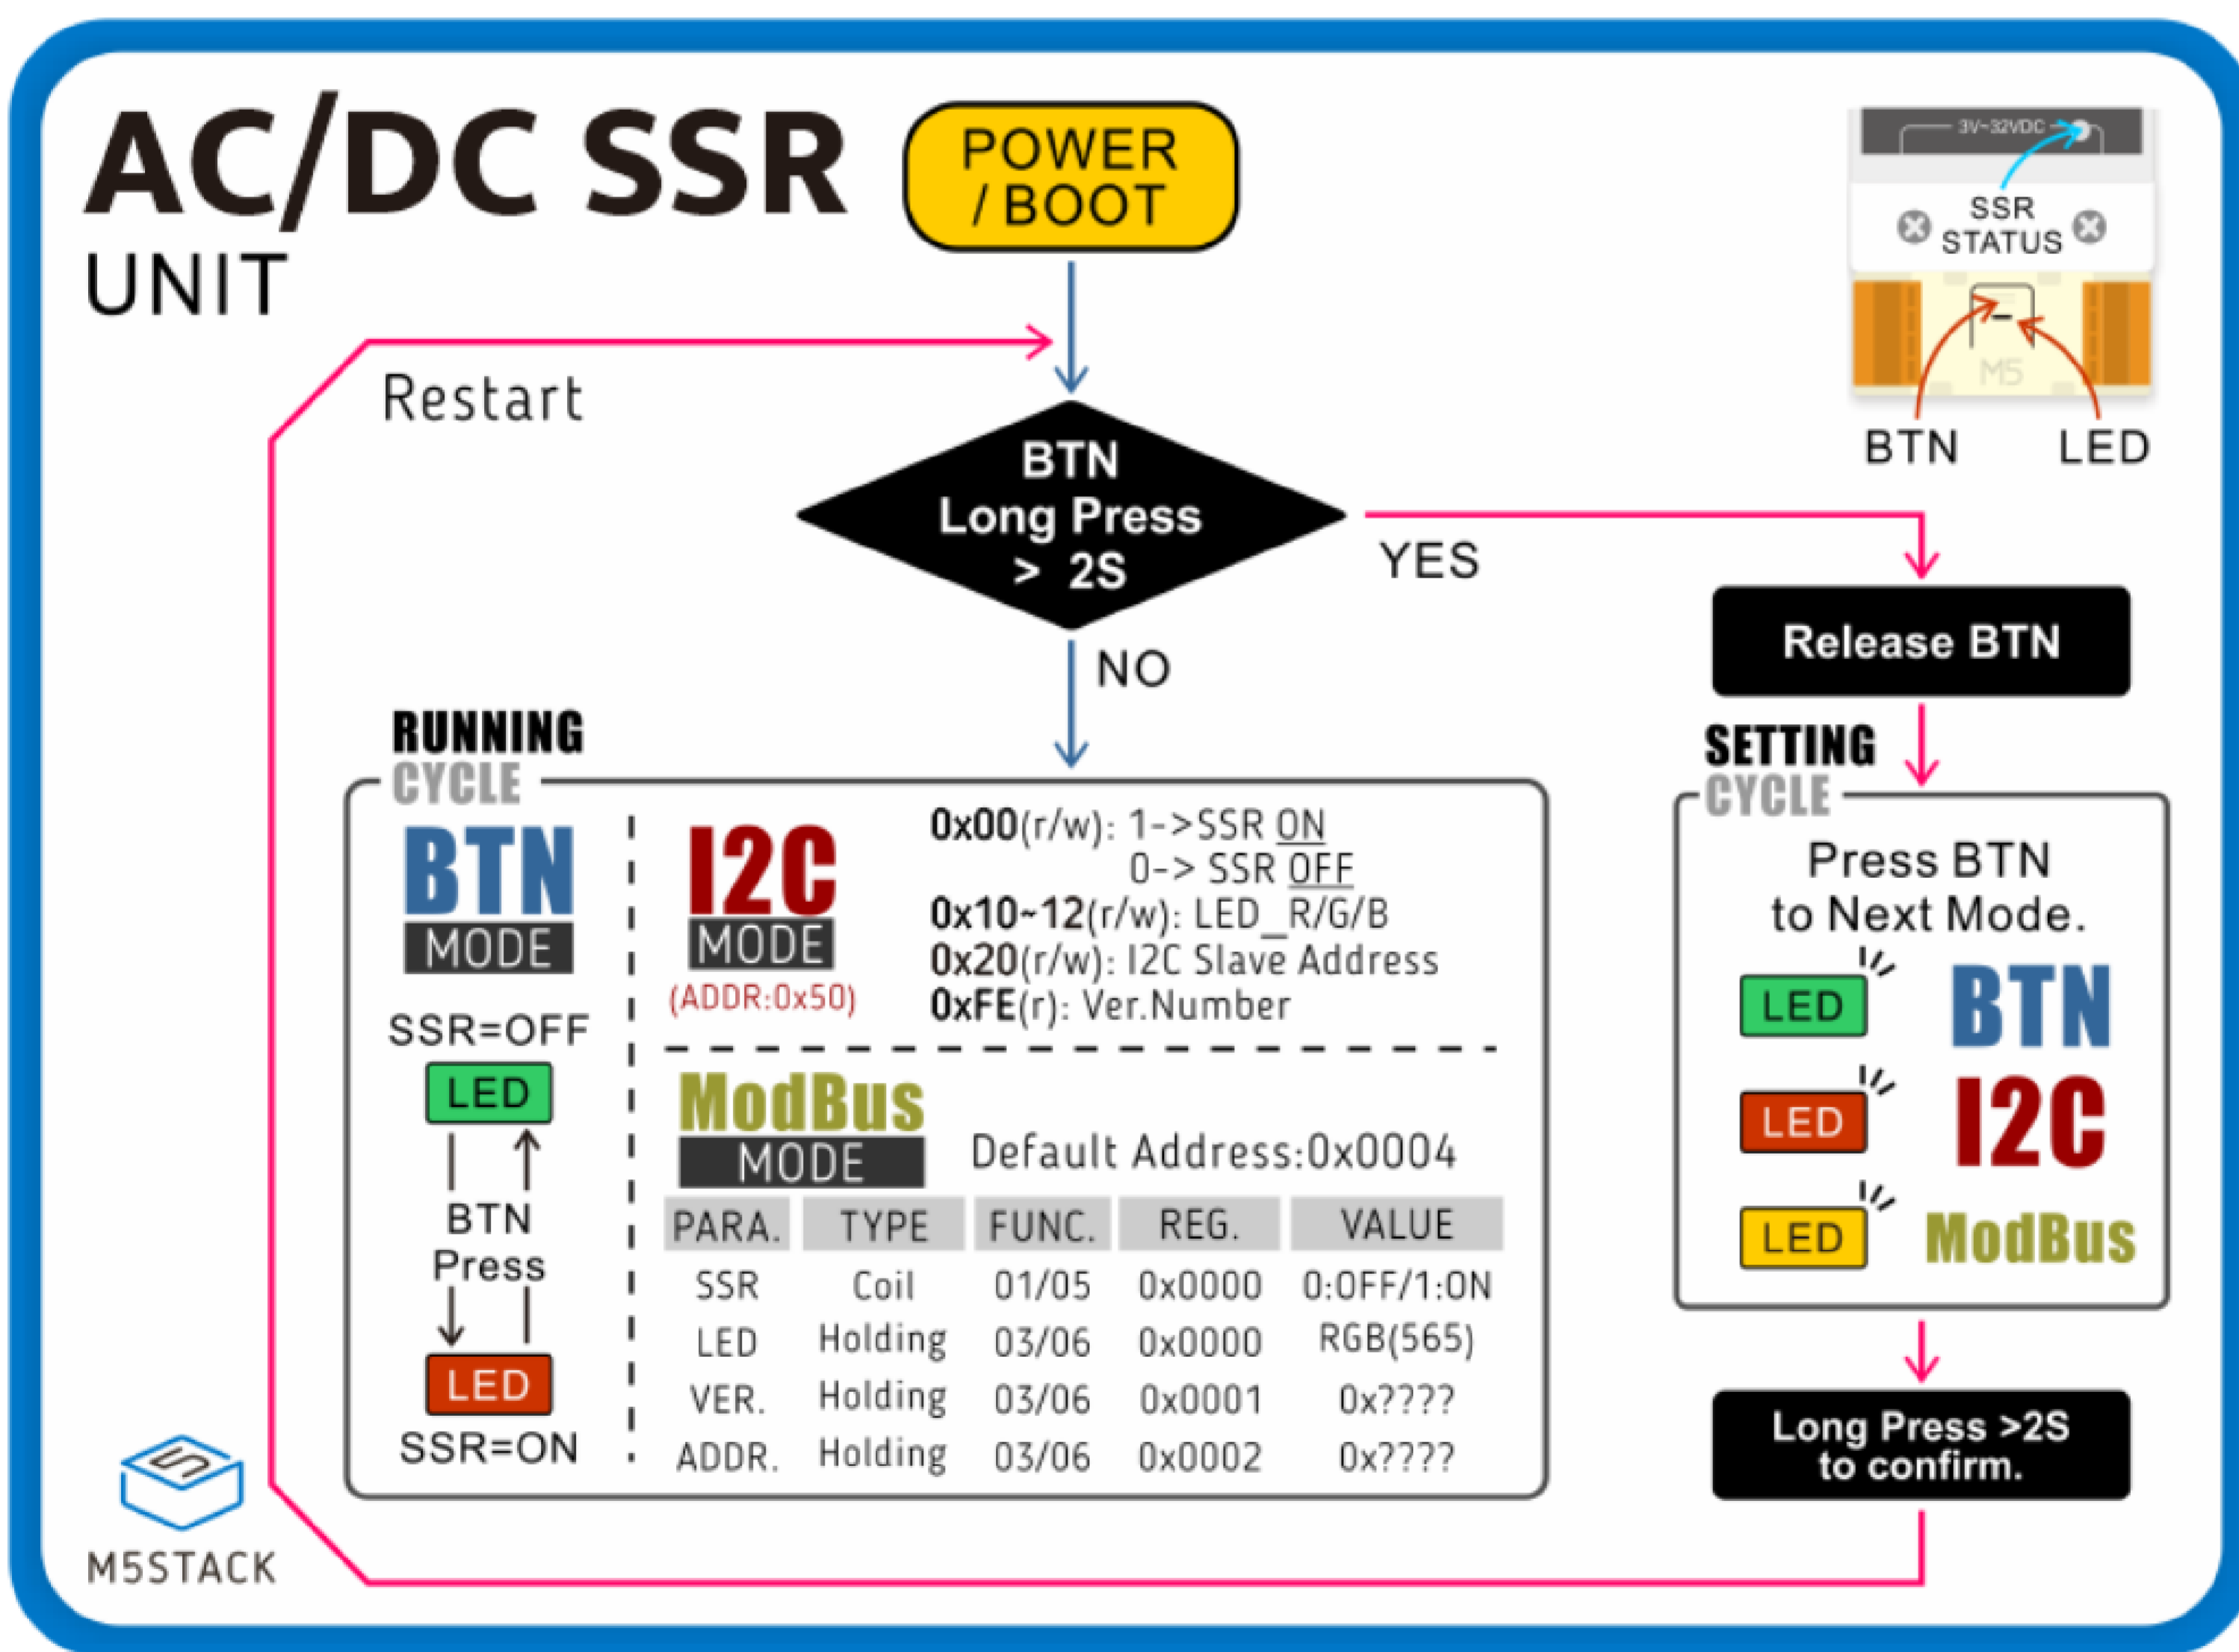

- DC line interrupting
- Motor equipment control
- Temperature control devices

Specification

Resources	Parameters
Main Controller	ESP32C3
Programmable RGB LED	SK6812
Load Current	10A
Input Control Voltage	3-32VDC
Load Voltage	24~220VDC
Input Control Current	5mA~20mA
Breakdown Leakage Current	≤5mA
On-state Buck	≤1.6V
Operating current safety series	resistive load: 50% Inductive load: 50%
Electrical life time	≥1 million times
Indicator Light	Red (Lighted: Closed / Off: Disconnected)
Product Size	80 * 45 * 31mm
Package Size	147 * 90 * 40mm
Product Weight	112.6g
Package Weight	137.8g

UIFlow Blocks

- Set control mode (I2C / Modbus)

A UIFlow block with a maroon background. On the left is a dropdown menu with 'dcssr_0'. The text 'Set control mode' is in the center, and on the right is another dropdown menu with 'I2C'.

- Init I2C address

A UIFlow block with a maroon background. On the left is a dropdown menu with 'dcssr_0'. The text 'Init I2C address' is in the center, followed by a light blue input field containing '0x50'.

- Get I2C RGB LED value

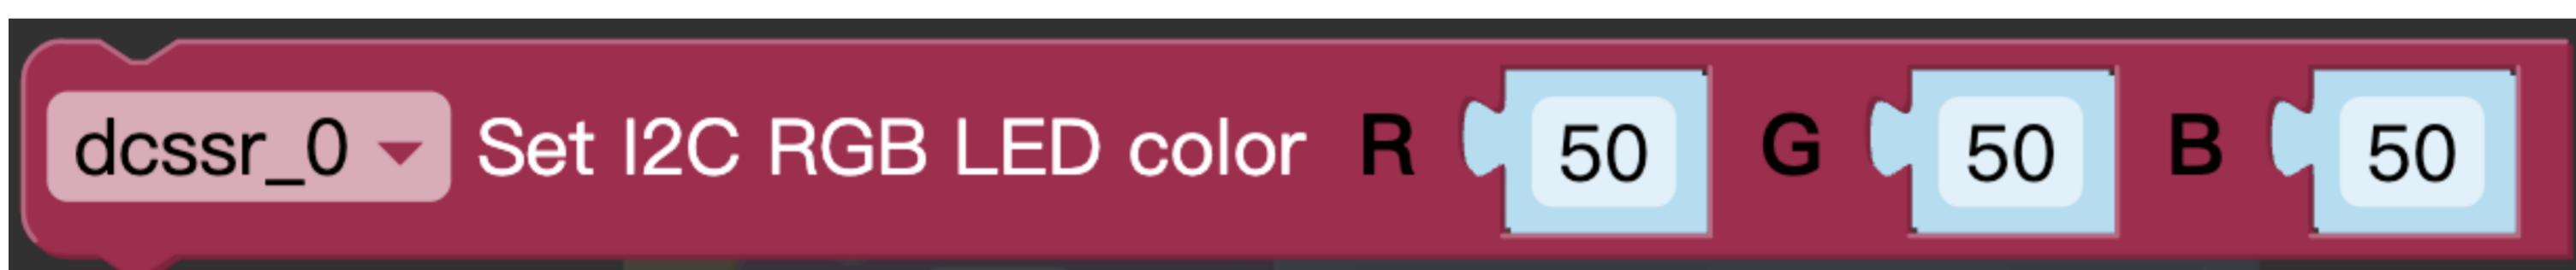

A UIFlow block with a maroon background. On the left is a dropdown menu with 'dcssr_0'. The text 'Get I2C RGB LED value' is in the center.

- Set I2C SSR state

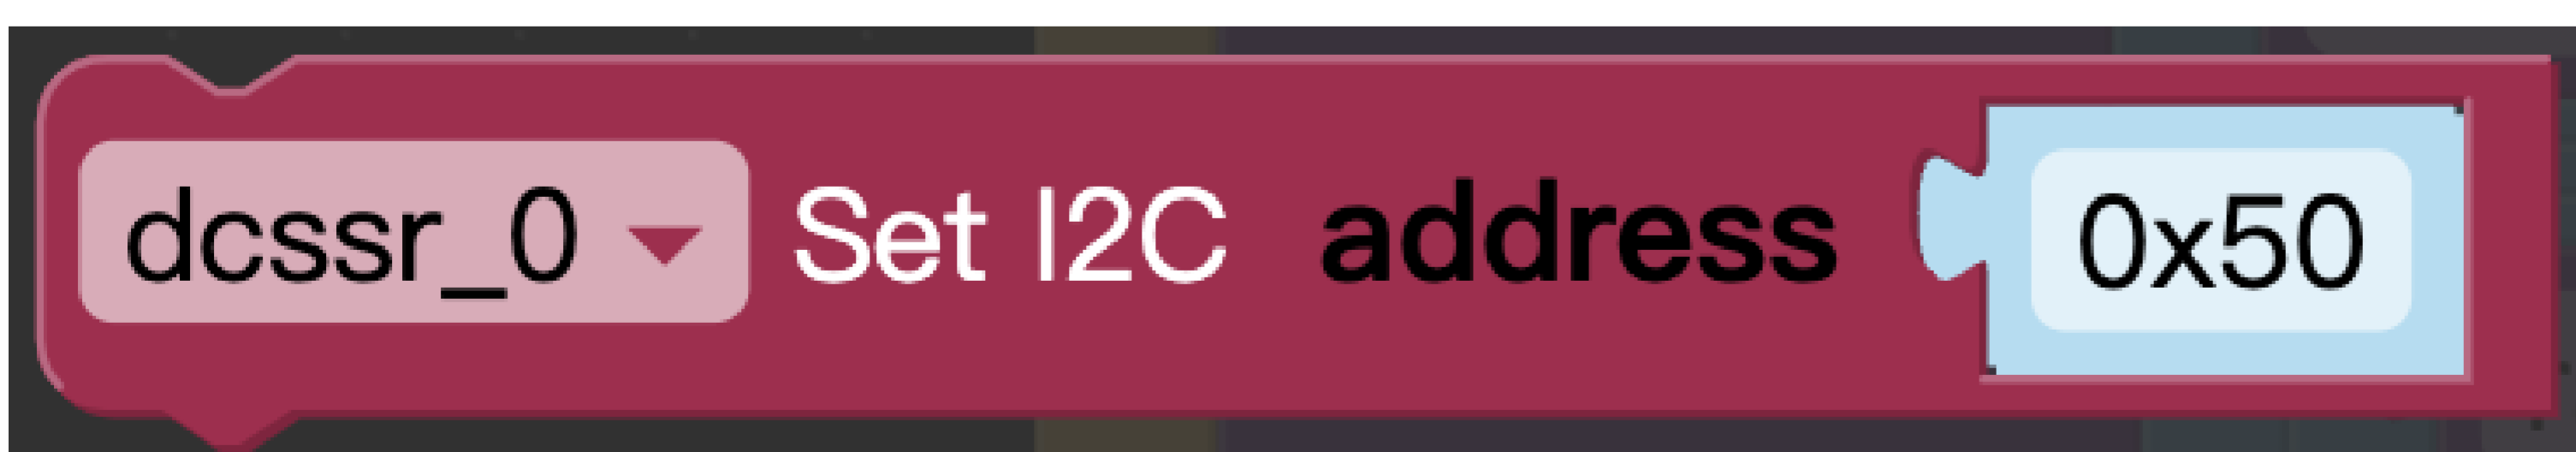

A UIFlow block with a maroon background. On the left is a dropdown menu with 'dcssr_0'. The text 'Set I2C SSR state' is in the center, followed by a dropdown menu with 'ON'.

- Set I2C RGB LED color

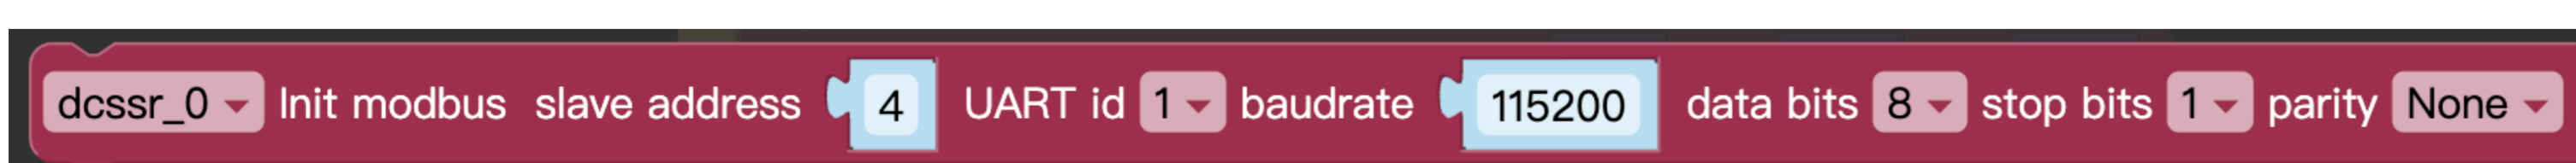

A UIFlow block with a maroon background. On the left is a dropdown menu with 'dcssr_0'. The text 'Set I2C RGB LED color' is in the center, followed by three light blue input fields: 'R 50', 'G 50', and 'B 50'.

- Set I2C address

A UIFlow block with a maroon background. On the left is a dropdown menu with 'dcssr_0'. The text 'Set I2C address' is in the center, followed by a light blue input field containing '0x50'.

- Init modbus

A UIFlow block with a maroon background. On the left is a dropdown menu with 'dcssr_0'. The text 'Init modbus' is in the center, followed by several input fields: 'slave address 4', 'UART id 1', 'baudrate 115200', 'data bits 8', 'stop bits 1', and 'parity None'.

- Get modbus SSR status
