

# ■ Features :

- Universal AC input/Full range
- ZVS new technology
- AC input active surge current limiting
- Built-in active PFC function, PF>0.95
- Protections: Short circuit / Overload / Over voltage / Over temperature
- Forced air cooling by built-in DC ball bearing fan
- High power density 8.3W/inch³
- Output voltage can be trimmed between 20% ~ 110% rated value
- Current sharing up to 4500W(2+1)
- Alarm signal output
- Built-in 12V/0.1A auxiliary output for remote control
- Built-in remote ON-OFF control
- Built-in remote sense function
- 3 years warranty

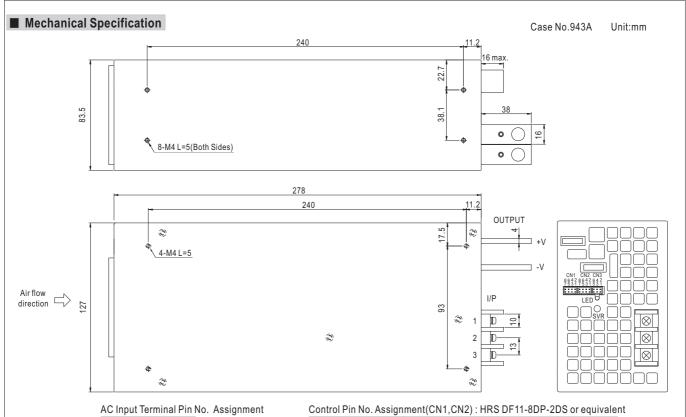

# **SPECIFICATION**

| MODEL       |  | SPV-1500-12   | SPV-1500-24         | SPV-1500-48       |  |  |

# ■ Function Manual

#### 1.Remote ON/OFF

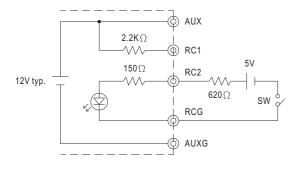

- (1)Remote ON/OFF control becomes available by applying voltage in CN1 & CN2 & CN3
- (2) Table 1.1 shows the specification of Remote ON/OFF function
- (3)Fig.1.2 shows the example to connect Remote ON/OFF control function

Table 1.1 Specification of Remote ON/OFF

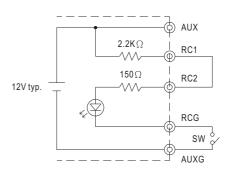

| • |                   |            |             |             |             |

|   | Connection Method |            | Fig. 1.2(A) | Fig. 1.2(B) | Fig. 1.2(C) |
|   | SW Logic          | Output on  | SW Open     | SW Open     | SW Close    |
|   | 3 W Logic         | Output off | SW Close    | SW Close    | SW Open     |

Fig.1.2 Examples of connecting remote ON/OFF

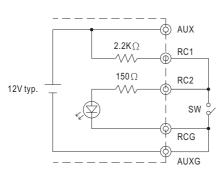

#### (A)Using external voltage source

#### (B)Using internal 12V auxiliary output

#### (C)Using internal 12V auxiliary output

### 2.Alarm Signal Output

(1)Alarm signal is sent out through "P OK" & "P OK GND" pins

(2)An external voltage source is required for this function. The maximum applied voltage is 50V and the maximum sink current is 10mA

(3) Table 2.1 explains the alarm function built-in the power supply

| ` ' |          | •   |   |  |  |
|-----|----------|---|---|--|--|
|     | Function | Description   | Output of alarm(P OK)                                   |  |  |
|     | P OK     | The signal is "Low" when the power supply is above 15% of the rated output voltage-Power OK             | Low<br>(0.5V max at 10mA)                               |  |  |
|     | POR      | The signal turns to be "High" when the power supply is under 15% of the rated output voltage-Power Fail | High or open<br>(External applied voltage<br>10mA max.) |  |  |

Table 2.1 Explanation of alarm function

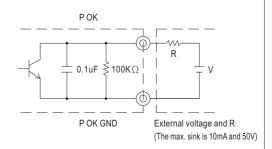

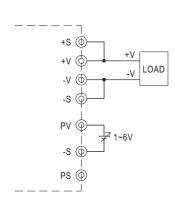

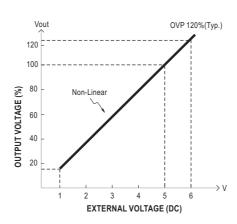

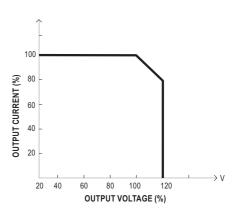

Fig. 2.2 Internal circuit of P OK (Open collector method)

#### 3.External Voltage Control

Note: (1)Reference voltage terminal, PS and PV are connected when shipping (2)+S & +V, -S & -V also need to be connected on CN1 or CN2.

#### 4. Current Sharing

- (1)Parallel operation is available by connecting the units shown as below (+S,-S and LS are connected mutually in parallel):
- (2)The voltage difference among each output should be minimized that less than 0.2V is required
- (3)The total output current must not exceed the value determined by the following equation (Output current at parallel operation)=(The rated current per unit) x (Number of unit) x 0.9
- (4) In parallel operation 3 units is the maximum, please consult the manufacturer for other applications
- (5) When remote sensing is used in parallel operation, the sensing wire must be connected only to the master unit

Note: In parallel connection, maybe only one unit (master) operate if the total output load is less than 5% of rated load condition.

The other PSUs (slaves) may go into standby mode and their output LEDs will not turn on.
