

JUMO ecoTRON M Electronic Microstat

76 x 36 mm format

Brief description

The JUMO ecoTRON M is a compact, digital electronic thermostat for simple temperature control (heating or cooling). The measurement input permits the connection of resistance thermometers or thermocouples, or standard current or voltage signals. The measured value is shown on a 3-digit backlit display. The switching states of relays K1 and K2 are indicated by two LEDs.

The instrument incorporates a simple defrosting function as well as an operating hours counter, which can, for instance, be used to record the operating time of a cooling compressor.

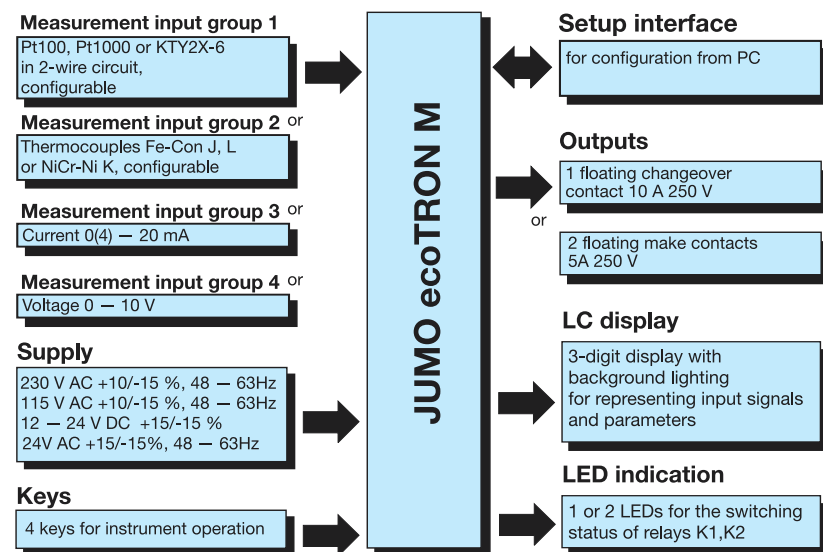

The instrument can be operated from 4 keys on the front panel. The electrical connection is made via screw terminals on the back of the instrument.

A setup program and a PC interface are available as accessories, for simple configuration and parameterization from a PC.

Timing functions

Special case:
tCY can only be set to if ti.0 has previously been set to . Afterwards, the defrosting duration is again set to the desired value.

Keep to this sequence !

- * First set ti.0 to
- * Then set tCY to
- * Now set defrosting duration ti.0 again

Heating controller

The starting action after power ON is set via the parameter P.On
