

JUMO di eco Digital Indicator

76mm x 36mm format

Brief description

The **JUMO di eco** compact digital indicator is used for the simple visualization of temperatures or standard signals. The measurement input permits the connection of resistance thermometers or thermocouples, or standard current or voltage signals. The measured value is shown on a 3-digit backlit display.

Limit infringements are monitored by means of a 10A relay (changeover contact) and indicated by an LED.

The 3 keys on the front panel can be used to configure, among others, the switching hysteresis and alarm suppression.

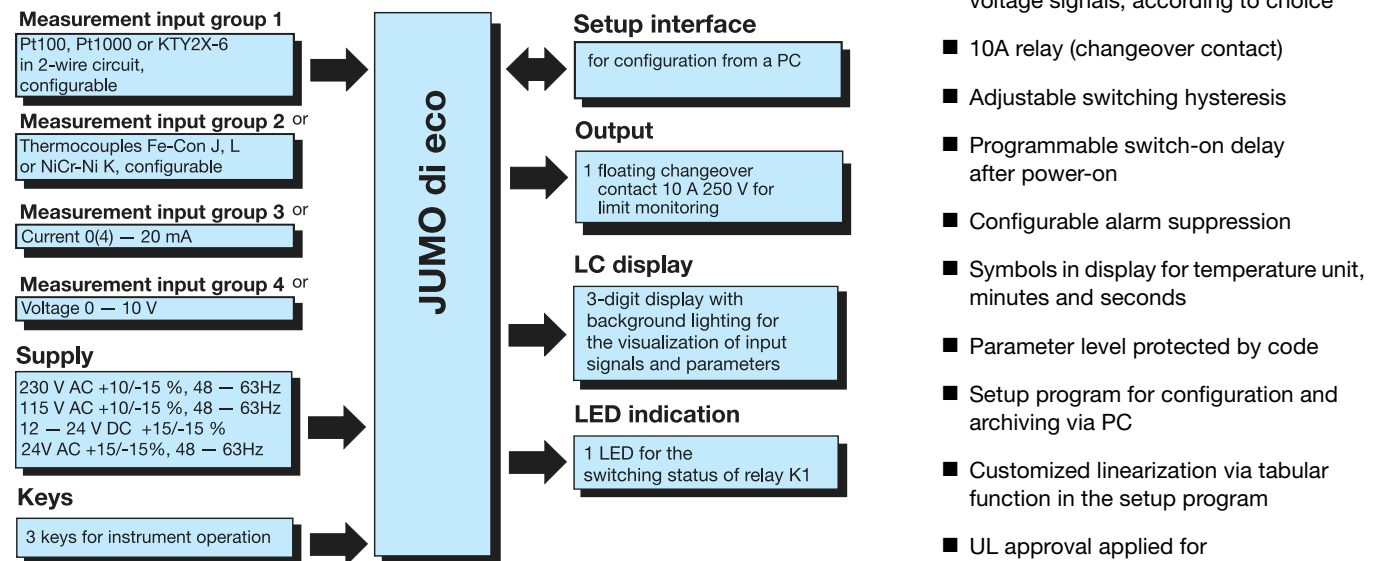

The electrical connection is made via screw terminals on the back of the instrument.

A setup program and a PC interface are available as accessories, for simple configuration and parameterization from a PC.

Voltage	0 — 10 V	-1 to 11 V scalable with Δ_{CL} and Δ_{CH} or customer table	0.1%/ ≤100ppm/°C	-	-
Input resistance $R_{IN} \geq 100k\Omega$					
1.) The accuracies refer to the measuring range span. 2.) valid from -50°C 3.) A valid customer table must be entered via the setup program and switched over to Δ_{AB} in the instrument. This may reduce the measuring accuracy.
